## Concepts:

- Chemical bonding
- Covalent bonding
- Ionic bonding
- Metallic bonding
- Intermolecular bonding
- Physical & chemical properties
- Electronegativity

## Introduction

- Types of bonds: ionic, covalent, metallic, hydrogen, van der Waals
- In order to understand how all substances interact, we need to know how they are bonded, energy
- In order to know a substance's chemical and physical properties, we need to know how they are bonded

### Electronegativity

- Electronegativity: tendency of an atom to attract electrons towards itself in a covalent bond
- Pauling scale: 0 to 4
- Fluorine: most electronegative element (4.0)
- Cesium: least electronegative element (0.7)

### Chemical bonding

- Ionic bonding: transfer of electrons from one atom to another
- Covalent bonding: sharing of electrons between two atoms
- Metallic bonding: delocalized electrons in a metal lattice

Electronegativity is a measure of an atom's ability to attract electrons. It is a relative property, with fluorine being the most electronegative element (4.0) and cesium being the least (0.7). The difference in electronegativity between two atoms determines the type of bond they form: ionic (large difference), covalent (small difference), or metallic (very small difference).

impediments to generalising study results to diverse teaching and learning contexts As a result the author highlights both the need to read published studies critically and the value of teachers and lecturers testing out recommended innovations in their own classrooms Chemical Pedagogy introduces core principles from research into human cognition and learning to provide a theoretical perspective on how to best teach for engagement and understanding An examination of some of the more contentious debates about pedagogy leads to the advice to seek optimally guided instruction which balances the challenge offered to learners with the level of support provided This provides a framework for discussing a wide range of teaching approaches and techniques that have been recommended to those teaching chemistry across educational levels including both those intended to replace teaching from the front and others that can be built into traditional lecture courses to enhance the learning experience Research in Education ,1974 The Living Ocean Teacher's Guide , *Catalog of Copyright Entries.
