

# QUALITIES OF A GOOD RESEARCH PAPER

Research is about more than just the scientific principles and discoveries you are making—it is about sharing these discoveries with fellow researchers and with the public. And to do this, researchers must publish their work in journals. Strong writing is key to making your research more accessible and powerful, and therefore this presentation is not about the rigors of research, but the demands of research writing. The methods and information in this lecture can be applied to almost any kind of research paper, although of course the exact structure and content will be somewhat determined by where you are submitting your research.

**Writing Human Factors Research Papers** Professor Don Harris, 2012-10-01 Writing high quality papers suitable for publication within international scientific journals is now an essential skill for all early career researchers their career progression and the reputation of the department in which they work depends upon it However many manuscripts are rejected or sent back for major re working not because the science they contain is in any way bad but because the same problems keep occurring in the way that the material is presented It is one thing to write a good scientific paper however it is quite another thing to get it published This requires some additional nous In writing this book Don Harris draws upon nearly a quarter of a century of experience as an author and reviewer of research papers and ultimately as a journal editor By his own admission it contains all the things he wished that his mentors had told him 25 years ago but didn't The material in the book is drawn from many years of finding all these things out for himself usually by trial and error but mostly error The text adopts a much lighter touch than is normally found in books of this type after all who really wants to read a book about writing research papers The author describes his own unique approach to writing journal

papers which in his own words has proved to be extremely successful All major points are illustrated with examples from his own published works The book is written in the form of a manual for constructing a journal manuscript read a chapter write a section However the material it contains goes beyond just this and also describes how to select a target journal the manuscript submission process what referees are looking for in a good journal paper and how to deal with the referees comments Each chapter concludes with a checklist to ensure all the key elements have been addressed

**Economic Valuation of Water Resources in Agriculture** R. Kerry Turner,2004-01-01 The purpose of this report is to produce a review on water resource valuation issues and techniques specifically for the appraisal and negotiation of raw as opposed to bulk or retail water resource allocation for agricultural development projects The review considers raw water in naturally occurring watercourses lakes wetlands soil and aquifers taking an ecosystem function perspective at a catchment scale and takes account of the demands from irrigated and rainfed agriculture It is hoped that the review will have particular application to developing countries where agreed methods for reconciling competing uses are often absent but nevertheless takes account of valuation approaches that have been made in post industrial economies

**Neurogenic bladder and bowel dysfunction** Peter Wide,2020-09-11 Spinal dysraphism SD is a congenital malformation that to a varying extent often severely affects the life of the child and the family Most individuals with SD suffer from neurogenic bladder and bowel dysfunction with the risk of urinary tract infections renal deterioration urinary and fecal incontinence that affects social

participation and quality of life negatively. In newborns with SD, early detection of neurogenic bladder dysfunction and determination of post void residual urine are required to determine the need of clean intermittent catheterization (CIC) and follow up. The non-invasive method of four-hour voiding observation with provocation test (VOP) was used to evaluate bladder function in 50 newborn children with SD. Voiding patterns for the children were described and compared with those of 50 healthy newborns evaluated with VOP in an earlier study. Comparison revealed significant differences among several variables. In particular, leakage at provocation test and not voiding with a stream were common in newborns with SD but did not occur in healthy newborns. VOP is a non-invasive standardized method to determine residual urine in newborns with SD. It also adds information on voiding pattern, frequency, voiding with a stream, and leakage at provocation. Findings in neonatal VOP of the same cohort of newborns with SD were then related to radiology, presence of urinary tract infections during the first year, and urodynamic findings and use of CIC at the age of one year. It was found that in children with SD, not voiding with a stream may have a predictive value for the need of CIC at the age of one year, followed probably by lifelong CIC. Despite this, the presence of an open SD per se has stronger predictive value, and each child needs to be evaluated individually while considering a number of factors. The main value of VOP may be as a structured non-invasive screening method to uncover neurogenic bladder sphincter dysfunction in the newborn. Studies with a larger number of subjects than the present are needed to evaluate the potential of VOP in newborns with closed spinal dysraphism, in whom the neurological consequences vary. A retrospective analysis detected renal damage on DMSA scintigraphy in 5 of 41 children with SD who were followed according to a proactive national program with minimal use of surgery. Median follow-up time was 10 years. High baseline pressure was confirmed as a risk factor for renal damage. Compliance with treatment and follow-up is likely to be an important factor for renal health. Therefore, efforts to support children and their families are crucial. A questionnaire-based study of 107 children with SD, age 6–16 years, in Sweden and Norway examined aspects of treatment for neurogenic bowel dysfunction, focusing on incontinence, independence, general satisfaction, and quality of life. It was found that transanal irrigation (TAI) and antegrade colonic enemas (ACE) are effective treatments but are time-consuming and difficult to perform independently. The majority of children using TAI (72%) and ACE (63%) never went to the toilet alone to empty their bowels. As children achieving independence on the toilet reported higher quality of life, efforts to support independence are beneficial. Continent self-managing children with healthy kidneys enjoy high quality of life and contribute more fully to society. Therefore, further research is required to investigate and develop existing and new technologies and methods that mitigate the problems related to SD and to make them accessible to all children with spinal dysraphism. Under de senaste 50 åren har det skett en snarast ende utveckling av mjäligheterna för barn som föds med ryggmärgsbräck. Tidigare har majoriteten av barn med ryggmärgsbräck avlidit redan som spädbarn, men idag överlever de flesta till vuxen ålder. Utan aktiva insatser och uppföljning råder dock risken för medicinska problem och allvarlig påverkan på livet, mycket stor. Nu när nästan alla barn överlever ligger

fokus på att också öka livskvalitet och självständighet för personer med ryggmrgsbräck N stannar alla med ryggmrgsbräck måste hantera en allvarlig påverkan på blås och tarmen med risk för njurskador inkontinens och förstoppning I avhandlingens två första studier valde vi en metod att med minimalt obehag för barnet bedöma blåsfunktionen Detta för att kunna skilja ut de barn som behöver genomgå mer avancerade undersökningar och hjälpa med blås mningen genom tå tappningar med kateter så kallad ren intermittent kateterisering RIK N r vi jämförde resultatet av testet för 50 nyfödda med ryggmrgsbräck med samma undersökning av 50 friska nyfödda fann vi stora skillnader Mest tydligt var att de flesta nyfödda med ryggmrgsbräck 69% men inga friska nyfödda lade urin när man tryckte på blåsan Av nyfödda med ryggmrgsbräck kissade de flesta 74% inte med ströle vilket alla friska nyfödda gjorde Att inte kissa med ströle talade också starkt för att barnet skulle komma att behöva hjälp med RIK för att tömma blåsan vid ett års ålder och sannolikt livet ut Sammantaget visade avhandlingens två första arbeten att den metod för bedömning av blåsfunktion vi undersökt kan användas för att styra uppföljning och behandling av nyfödda med ryggmrgsbräck Avhandlingens tredje studie visade att aktiv uppföljning av barnen enligt ett nationellt vårdprogram lyckades förhindra njurskador hos de flesta men att höga tryck i urinblåsan och återkommande urinvägsinfektioner ökade risken för skador även familjernas förmodligen att i en pressad vardag klara av att genomföra de ofta krävande behandlingar och undersökningar som rekommenderas verkade vara viktig för att förhindra njurskador Stötning av familjerna är därför viktig Avhandlingens fjärde arbete berörde tarmen som stannar alltid påverkad vid ryggmrgsbräck med risk för svår förstoppning och avföringsläckage Detta har påtaglig påverkan på barnen och deras familjer En tredjedel av de 107 familjerna i vår enkätundersökning i Sverige och Norge barn 6-16 år beskrev att man fått avstå från aktiviteter såsom resor på grund av barnets tarmproblem och de barn som hade avföringsläckage rapporterade tydligt lägre livskvalitet än andra Trots denna allvarliga påverkan finns det hittills inga studier som jämför de olika behandlingar som barnet kan använda I vår enkät kartlade vi därför vilka metoder som användes och hur bra de fungerade Vi ställde frågor till både barn och föräldrar särskilt om avföringsläckage hur ofta man var med metoden barnens livskvalitet och självständighet på toaletten Det var utifrån svaren tydligt att både de vanligaste typerna av tarmsköljning var effektiva men tidskrävande och svara för barn och ungdomar att klara att utföra på egen hand Ingen metod visade sig överlägsen den andra men de barn som klarade att sköta tarmtomningen själv skattade sin livskvalitet klart högre än andra Vi drar därför slutsatsen att det är viktigt att vårdpersonal diskuterar de olika behandlingsalternativen med barn och föräldrar och tillsammans med dem väljer den metod som passar det enskilda barnet bäst Därför skapas bästa förutsättningar för att gemensamt arbeta vidare för att uppnå största möjliga självständighet Självständiga individer med friska njurar och utan urin och avföringsinkontinens upplever högre livskvalitet och behöver mindre sjukvård och andra samhällsinsatser Det behövs mer forskning för att utveckla existerande och nya metoder att hantera de allvarliga komplikationer som riskerar att drabba barn och vuxna med ryggmrgsbräck
