Quantum Wheelchair Manual:

The Physical, Personal, and Social Impact of Spinal Cord Injury Jenny Lieberman, 2022-10-31 This compact book uniquely examines individual lived experience with spinal cord injury SCI. It provides education and a clearer understanding of the many facets of a SCI: medical, physical, psychological, cognitive, personal, and social, in a single compact volume so that readers learn the effect a SCI can have on a person. The contents also include resources for more specific exploration of information. SCI is a direct public health concern due to not only the cause of the injury itself, most often of violent origin, but also how the individuals perceive themselves after the injury and their participation in society, as well as how society welcomes them back. This compact book has four distinct chapters, each one addressing a different component of SCI with a set of resources to guide the individual with SCI, their family, and their friends in the process. It first explores the physical, as a means to provide an understanding of what body changes occur. From there, it goes on to examine what is the subjective meaning and lived experience of disability for persons with SCI. The brief ends with an examination of what organizations and programs exist to promote independence and a sense of community for persons with SCI. *The Physical, Personal, and Social Impact of Spinal Cord Injury: From the Loss of Identity to Achieving a Life Worth Living* is a book with broad appeal. It is written in such a way that it serves as a useful and accessible resource for people who work with persons with SCI, students, and instructors with an interest in the subject, as well as persons with SCI themselves and their families.

Seating and Wheeled Mobility Michelle L. Lange, Jean L. Minkel, 2024-12-30 Fully updated and expanded in its second edition, *Seating and Wheeled Mobility: A Clinical Resource Guide* presents clinical assessment considerations when working with a person with a mobility disability. The book provides a wide spectrum of information, from foundational information for those practitioners who are new to the field to in-depth, population-specific information for practitioners who perhaps have not worked with a particular population in the past. The book is divided into sections, each section addressing a different area of clinical practice in wheelchair seating and mobility. The first section is an in-depth presentation of the assessment process and pressure management. The range of available seating supports is presented as part of the product selection process, including matching the person's needs with available technology. The second section focuses on 24-hour postural care. Three types of sitters are presented: hands-free, hands-dependent, and prop sitters. Included is the most current method to measure and describe the seated person and related support surfaces needed when recommending a device. The third section lays the foundation for clinical decision-making around the selection and fit of the most appropriate wheeled mobility device: manual, power wheelchair, or scooter. The fourth section provides in-depth clinical applications for each mobility category. On-time mobility for the very young, power seating, and mobility skills training are addressed. The fifth section provides population-specific clinical application of position, pressure management, and mobility for the pediatric, geriatric, and bariatric populations, as well as persons with both degenerative and complex neuromuscular impairments. The sixth section presents

additional considerations when working with persons who are aging with a disability considerations of the environment of use safe transport of a wheelchair and the application of wheelchair standards in the clinic Finally measuring outcomes throughout the service provision process and a look at the past present and future of complex rehab technology is included Richly illustrated throughout this book has been carefully designed to support occupational and physical therapists suppliers distributors and funders payers who are interested in wheelchair seating and mobility assessment and applications
