

QUANTUM TURBO BATTERY

OPERATING INSTRUCTIONS

For Turbo Batteries with Serial Numbers : K37173 and below

INTRODUCTION

The Quantum Turbo Battery is a dynamic and powerful power pack for portable flashes. It's much more than a high capacity battery. The Turbo converts its battery's low voltage to high voltage that is applied directly to your flash unit's flashtube via a cable connection. This bypasses the slow "recycling circuits" and limited battery power of a standard flash and converts it into a "super" flash.

Caution!

Do not exceed the flash manufacturer's recommendation for the maximum number of consecutive full-power flashes, (if no recommendation is given do not exceed 36 consecutive flashes) without a minimum rest period of 10 minutes to cool off. In any case, do not needlessly stress the flash by firing it rapidly to "test" Turbo performance. The Turbo is very powerful and more durable than the flashes it powers.

Warning!

Do not disassemble or open the Quantum Turbo Battery case under any circumstances. There are no user serviceable parts inside. Return defective equipment only to the factory for repair. The Turbo contains high voltage circuits which must be serviced by qualified technicians only. You may permanently damage your unit or harm yourself if you attempt to open it!

CHARGING INSTRUCTIONS

General Rules About Charging:

To maximize the life of your Turbo battery: Recharge within 6 hours after using, **preferably sooner**. If you deplete all the Turbo's battery power and the red 1/4 light indicator goes out recharge **immediately!** Charge the Turbo before using it for the first time.

Charging Sequence:

A. Turn the Turbo OFF.

Plug the charger into the Turbo and into an outlet. Select an outlet that cannot be accidentally turned off.

B. When the charger is connected, the charge indicator sequence is as follows:

▼ Plug Indicator Light - A steady on light indicates the charger is properly connected.

▲ Pyramid Indicator Light - Displays the charging status:

INITIAL CHARGE - A steady light followed by a blinking light, its rate varying as the battery is charging.

FULL CHARGE - After 12 hours a normal full charge will be assured.

At this time the pyramid light will go out or blink on once every 5 seconds or slower.

For the first 10 recharge cycles of a **brand new** battery, the pyramid light may not slow down within 12 hours. Nevertheless, this is enough time for a full charge for these break-in cycles.

You may recharge a partly or fully discharged battery to full power without fear of battery "memory". We recommend "topping off" a battery by giving it an overnight charge before using it. You may charge longer than a full charge indication, however we do not recommend charging for more than three days.

If you find the Turbo's capacity has decreased substantially it may be the result of undercharging. Stop using the battery and charge for 48 to 72 hours before the next use. Disregard the pyramid light during this special charge.
