An assessment system for rating scientific journals in the field of ergonomics and human factors

Jan Dul¹, Waldemar Karwowski²

Abstract: A method for selecting and rating scientific and professional journals representing the discipline of ergonomics and human factors is proposed. The method is based upon the journal list, impact factors and citations provided by the Institute of Scientific Information (ISI), and the journal list published in the Ergonomics Abstracts. Three groups of journals were distinguished. The 'ergonomics journals' focus exclusively on ergonomics or human factors. The 'related journals' focus on other disciplines than ergo... [Show more](#)

Rating Of Scientific Journals :

Peer review in scientific publications Great Britain: Parliament: House of Commons: Science and Technology Committee, 2011-07-28 This report indicates that the oversight of research integrity in the UK is unsatisfactory The Science and Technology Committee concludes that in order to allow others to repeat and build on experiments researchers should aim for the gold standard of making their data fully disclosed and made publicly available The report examines the current peer review system as used in scientific publications and the related issues of research impact data management publication ethics and research integrity The UK does not seem to have an oversight body for research integrity covering advice and assurance functions across all disciplines and the Committee recommends the creation of an external regulator It also says all UK research institutions should have a specific member of staff leading on research integrity The report highlights concerns about the use of journal Impact Factor as a proxy measure for the quality of research or of individual articles Innovative ways to improve current pre publication peer review practices are highlighted in the report including the use of pre print servers open peer review increased transparency and online repository style journals The growth of post publication peer review and commentary also represents an enormous opportunity for experimentation with new media and social networking tools which the Committee encourages There should also be greater recognition of the work sometimes considered to be a burden carried out by reviewers by both publishers and employers In order to do this publishers need to have in place systems for recording and acknowledging the contribution of those involved in peer review

Peer Review and Manuscript Management in Scientific Journals, 2008-04-15 This comprehensive yet concise book provides a thorough and complete guide to every aspect of managing the peer review process for scientific journals Until now little information has been readily available on how this important facet of the journal publishing process should be conducted properly Peer Review and Manuscript Management in Scientific Journals fills this gap and provides clear guidance on all aspects of peer review from manuscript submission to final decision Peer Review and Manuscript Management in Scientific Journals is an essential reference for science journal editors editorial office staff and publishers It is an invaluable handbook for the set up of new Editorial Offices as well as a useful reference for well established journals which may need guidance on a particular situation or may want to review their current practices Although intended primarily for journals in science much of its content will be relevant to other scholarly areas This wonderful work by Dr Hames can be used as a textbook in courses for both experienced and novice editors and I trust that it is what Dr Hames intended when she prepared this beautiful book Every scientific editor should read it Journal of Educational Evaluation for Health Professionals 2008 This book is co published with the Association of Learned and Professional Society Publishers ALPSP www.alpsp.org ALPSP members are entitled to a 30% discount on this book

Scientific Journals: Issues in Library Selection and Management Tony Stankus, 2019-12-06 This book first published in 1987 brings together from a variety of sources analysis on the major issues

involved in the collection of scientific journals Working from the premise that scientists tend to know much more about their subject than about their journals it examines the rationale for journal choices journals and tenure journals and budgeting and the elements of a good journal It shows librarians how to penetrate the internal structure of some imposing technical literatures in a way that can help them make responsible collection management decisions that even their science clientele will respect

Ranking Péter Érdi, 2020 Ranking of people schools products countries and just about everything else is part of our daily lives But we are in a paradoxical relationship with ranking we believe that ranking is good because it is informative and objective and we believe ranking is bad because it is biased and subjective and occasionally even manipulated Ranking The Unwritten Rules of the Social Game We All Play combines the application of scientific theories to everyday experience with entertaining personal stories

The Evaluation of Research in Social Sciences and Humanities

Andrea Bonaccorsi, 2018-01-04 This book examines very important issues in research evaluation in the Social Sciences and Humanities It is based on recent experiences carried out in Italy 2011 2015 in the fields of research assessment peer review journal classification and construction of indicators and presents a systematic review of theoretical issues influencing the evaluation of Social Sciences and Humanities Several chapters analyse original data made available through research assessment exercises Other chapters are the result of dedicated and independent research carried out in 2014 2015 aimed at addressing some of the debated and open issues for example in the evaluation of books the use of Library Catalog Analysis or Google Scholar the definition of research quality criteria on internationalization as well as opening the way to innovative indicators The book is therefore a timely and important contribution to the international debate

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the

heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point
