**Epistemological Foundations of Mathematical Experience** Leslie P. Steffe, 2012-12-06 On the 26th 27th and 28th of February of 1988 a conference was held on the epistemological foundations of mathematical experience as part of the activities of NSF Grant No MDR 8550463 Child Generated Multiplying and Dividing Algorithms A Teaching Experiment I had just completed work on the book Construction of Arithmetical Meanings and Strategies with Paul Cobb and Ernst von

Glaserfeld and felt that substantial progress had been made in understanding the early numerical experiences of the six children who were the subjects of study in that book While the book was in preparation I was also engaged in the teaching experiment on multiplying and dividing algorithms My focus in this teaching experiment was on investigating the mathematical experiences of the involved children and on developing a language through which those experiences might be expressed However prior to immersing myself in the conceptual analysis of the mathematical experiences of the children I felt that it was crucial to critically evaluate the progress that we felt we had made in our earlier work It was toward achieving this goal that I organized the conference When trying to understand the mathematical experiences of a child one can do no better than to interact with the child in a mathematical context guided by the intention to specify the child's current knowledge and the progress the child might make
