**Biology** Claude Alvin Villee, 1972     Rethinking History, Science, and Religion Bernard Lightman, 2019-10-03 The historical interface between science and religion was depicted as an unbridgeable conflict in the last quarter of the nineteenth century Starting in the 1970s such a conception was too simplistic and not at all accurate when considering the totality of that relationship This volume evaluates the utility of the complexity principle in past present and future scholarship First put forward by historian John Brooke over twenty five years ago the complexity principle rejects the idea of a single thesis of conflict or harmony or integration or separation between science and religion Rethinking History Science and Religion brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture such as recent developments in research on science and the history of publishing the global history of science the geographical examination of space and place and science and media have cast doubt on the complexity thesis or if it remains a serviceable historiographical model     Biology for Nonbiologists Frank R. Spellman, 2007-07-10 The list keeps growing The latest in Government Institutes non specialist series Biology for Nonbiologists continues the tradition established by Toxicology for Non Toxicologists and Chemistry for Nonchemists by providing environmental and occupational safety and health practitioners and students with a comprehensive overview of the principles and concepts of modern biology Covering everything from basic chemistry principles and the consequences of biology s interaction with the environment to basic biological principles and applications this convenient handbook provides a quick course on the science of biology You ll gain an understanding of and skill in biological principles and learn key biology concepts concerns and practices without spending weeks in a classroom Biology for Nonbiologists focuses on three areas environmental biology and ecology as they apply to environmental regulatory compliance programs human biology and community and ecosystem dynamics However it also covers all major biological themes including the cellular basis for life the interactions of organisms and the evolutionary process of all beings The author explains scientific concepts with little reference to mathematics and physical science and little technical language making the text easier to understand and more engaging for non science readers To further demystify the science Spellman also lists and defines essential biology terms and terms not often used in the environmental and safety fields Special study aids including end of chapter reviews and checkmarks that highlight important points enhance learning and allow readers to evaluate their understanding of the concepts presented     *Tech Notes* , 1991     **Medical Books and Serials in Print** , 1984     An evolutionary basis for pollination ecology S. Resources in Education ,1990-07      Nature's Body Londa L. Schiebinger,2004 Eighteenth century natural historians created a peculiar and peculiarly durable vision of nature one that embodied the sexual and racial tensions of that era When plants were found to reproduce sexually eighteenth century botanists ascribed to them passionate relations polyandrous marriages and suicidal incest and accounts of steamy plant sex began to infiltrate the botanical literature of the day Naturalists also turned their attention to the great apes just becoming known to eighteenth century Europeans clothing the females in silk vestments and training them to sip tea with the modest demeanor of English matrons while imagining the males of the species fully capable of ravishing women      Toward a Practice of Autonomous Systems Francisco J. Varela,Paul Bourguin,1992-04-02 Artificial life embodies a recent and important conceptual step in modern science asserting that the core of intelligence and cognitive abilities is the same as the capacity for living The recent surge of interest in artificial life has pushed a whole range of engineering traditions such as control theory and robotics beyond classical notions of goal and planning into biologically inspired notions of viability and adaptation situatedness and operational closure These proceedings serve two important functions they address bottom up theories of artificial intelligence and explore what can be learned from simple models such as insects about the cognitive processes and characteristic autonomy of living organisms while also engaging researchers and philosophers in an exciting examination of the epistemological basis of this new trend Topics Artificial Animals Genetic Algorithms Autonomous Systems Emergent Behaviors Artificial Ecologies Immunologic Algorithms Self Adapting Systems Emergent Structures Emotion And Motivation Neural Networks Coevolution Fitness Landscapes Contributors H Bersini Domenico Parisi Rodney A Brooks Christopher G Langton S Kauffman J L Denenbourg Pattie Maes John Holland T Smithersm H Swefel H Muhlenbein      Clinical Chemistry: Principles, Techniques, and Correlations with Navigate Advantage Access Michael L. Mercer,2012-12-06 This book is a compilation of presentations at the

first meeting devoted to the molecular and cellular biology of copper transport When we first considered the possible program for the meeting we felt that a forum to integrate the recent advances in molecular understanding of copper transport with the older knowledge of copper metabolism was needed In addition we wished to have a strong emphasis on the diseases of copper including the genetic diseases Menkes and Wilson and other possible health aspects of this metal seen from a molecular perspective Overall we were very happy with the success of the meeting and most participants were very enthusiastic Unfortunately we were not able to obtain manuscripts from every contributor but the selection in this book covers most of the topics discussed The history of biological research into copper dates from the latter half of the last century when the presence of copper as a component of living systems was first noted but it was not until the 1920s that the essential role of copper was first recognized I S McHargue found that plants and animals needed copper for optimal growth and health and proposed that copper was needed for life McHargue 1925 Other groups soon confirmed these observations in plants In animals the requirement of copper for hematopoiesis was discovered in 1928 Hart et al
