Split And Marge:

Women and Borderline Personality Disorder Janet Wirth-Cauchon, 2001 A superb up to date feminist analysis of the borderline condition Characterized by stereotypically feminine qualities such as poor interpersonal boundaries and an unstable sense of self borderline diagnosis has been questioned by many as a veiled replacement of the hysteria diagnosis Wirth Cauchon includes narratives from women exhibiting the theoretical underpinnings of the borderline diagnosis The author is rigorous in her analysis and mainstream academics and diagnosticians should take note lest they create yet another label that disregards the contradictory and conflicting expectations experienced by so many women Includes an excellent bibliography and a wealth of good reference Highly recommended Choice This book contributes to a rich feminist interdisciplinary theoretical understanding of women s psychological distress and represents an excellent companion volume to Dana Becker s book titled *Through the Looking Glass Psychology of Women* Quarterly Wonderfully written The argument proceeds with an impeccable and transparent logic the writing is sophisticated evocative even inspired This work should have enormous appeal Kenneth Gergen author of *Realities and Relationships* Impressive in its synthesis of many different ideas both clinicians and people diagnosed with BPD may find much of value in Wirth Cauchon s thoughtful and provoking analysis *Metapsychology* At the beginning of the twentieth century hysteria as a medical or psychiatric diagnosis was primarily applied to women In fact the term itself comes from the Greek meaning wandering womb We have since learned that this diagnosis had evolved from certain assumptions about women s social roles and mental characteristics and is no longer in use The modern equivalent of hysteria however may be borderline personality disorder defined as a pervasive pattern of instability of self image interpersonal relationships and mood beginning in early adulthood and present in a variety of contexts This diagnosis is applied to women so much more often than to men that feminists have begun to raise important questions about the social cultural and even the medical assumptions underlying this illness Women are said to be unstable when they may be trying to reconcile often contradictory and conflicting social expectations In *Women and Borderline Personality Disorder* Janet Wirth Cauchon presents a feminist cultural analysis of the notions of unstable selfhood found in case narratives of women diagnosed with borderline personality disorder This exploration of contemporary post Freudian psychoanalytic notions of the self as they apply to women s identity conflicts is an important contribution to the literature on social constructions of mental illness in women and feminist critiques of psychiatry in general Janet Wirth Cauchon is an associate professor of sociology at Drake University

Talking Voices Deborah Tannen, 2007-10-18 Written in readable vivid non technical prose this book first published in 2007 presents the highly respected scholarly research that forms the foundation for Deborah Tannen s best selling books about the role of language in human relationships It provides a clear framework for understanding how ordinary conversation works to create meaning and establish relationships A significant theoretical and methodological contribution to both linguistic and literary analysis it uses transcripts of tape recorded

conversation to demonstrate that everyday conversation is made of features that are associated with literary discourse repetition dialogue and details that create imagery This second edition features a new introduction in which the author shows the relationship between this groundbreaking work and the research that has appeared since its original publication in 1989 In particular she shows its relevance to the contemporary topic intertextuality and provides a useful summary of research on that topic

Pathology and the Postmodern Dwight Fee, 2000-02-11 This is a wonderful volume powerfully written timely insightful and filled with major pieces the passion intellectual rigor and sense of history found here promises to shape this field in the decades to come This volume sets the agenda for the future Norman K Denzin University of Illinois Pathology and the Postmodern explores the relationship between mental distress and social constructionism using new work from eminent scholars in the fields of sociology psychology and philosophy The authors address how specific cultural economic and historical forces converge in contemporary psychiatry and psychology how new syndromes subjectivities and identities are being constructed and *Segmentation of Hand Bone for Bone Age Assessment* Yan Chai Hum, 2013-05-25 The objective of this Brief is to provide a solution to the unsolved technical problem in segmentation for the automated bone age assessment system The task is accomplished by first applying the modified histogram equalized module then applying the proposed automated anisotropic diffusion technique It is followed by a novel fuzzy quadruple division scheme to optimize the central

segmentation algorithm and then an additional quality assurance scheme The designed segmentation framework works without demanding scarce resources such as training sets and skillful operators The results have shown that the designed framework is capable of separating the soft tissue and background from the hand bone with high accuracy This Brief should be especially useful for students and professional researchers in the Biomedical and image processing fields **Networking - ICN 2001** Pascal Lorenz,2003-06-29 The International Conference on Networking ICN01 is the first conference in its series aimed at stimulating technical exchange in the emerging and important field of networking On behalf of the International Advisory Committee it is our great pleasure to welcome you to the International Conference on Networking Integration of fixed and portable wireless access into IP and ATM networks presents a cost effective and efficient way to provide seamless end to end connectivity and ubiquitous access in a market where demands on Mobile and Cellular Networks have grown rapidly and predicted to generate billions of dollars in revenue The deployment of broadband IP based technologies over Dense Wavelength Division Multiplexing DWDM and integration of IP with broadband wireless access networks BWANs are becoming increasingly important In addition fixed core IP ATM networks are constructed with recent move to IP MPLS over DWDM More over mobility introduces further challenges in the area that have neither been fully understood nor resolved in the preceding network generation This first Conference ICN01 has been very well perceived by the International networking community A total of 300 papers from 39 countries were submitted from which 168 have been accepted Each paper has been reviewed by several members of the scientific Program Committee Performance Analysis of Flow Lines with Non-Linear Flow of Material Stefan Helber,2012-12-06 Flow line design is one of the major tasks in production management The decision to install a set of machines and buffers is often highly irreversible It determines both cost and revenue to a large extent In order to assess the economic impact of any possible flow line design production rates and inventory levels have to be estimated These performance measures depend on the allocation of buffers whenever the flow of material is occasionally disrupted for example due to machine failures or quality problems The book describes analytical methods that can be used to evaluate flow lines much faster than with simulation techniques Based on these fast analytical techniques it is possible to determine a flow line design that maximizes the net present value of the flow line investment The flow of material through the line may be non linear for example due to assembly operations or quality inspections Coarse-to-Fine Natural Language Processing Slav Petrov,2011-11-03 The impact of computer systems that can understand natural language will be tremendous To develop this capability we need to be able to automatically and efficiently analyze large amounts of text Manually devised rules are not sufficient to provide coverage to handle the complex structure of natural language necessitating systems that can automatically learn from examples To handle the flexibility of natural language it has become standard practice to use statistical models which assign probabilities for example to the different meanings of a word or the plausibility of grammatical constructions This book develops a general coarse to fine framework for learning and inference in

large statistical models for natural language processing Coarse to fine approaches exploit a sequence of models which introduce complexity gradually At the top of the sequence is a trivial model in which learning and inference are both cheap Each subsequent model refines the previous one until a final full complexity model is reached Applications of this framework to syntactic parsing speech recognition and machine translation are presented demonstrating the effectiveness of the approach in terms of accuracy and speed The book is intended for students and researchers interested in statistical approaches to Natural Language Processing Slav s work Coarse to Fine Natural Language Processing represents a major advance in the area of syntactic parsing and a great advertisement for the superiority of the machine learning approach Eugene Charniak Brown University
