What can we learn from spontaneously occurring brain and other physiological signals about an individual's cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual's cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic **Road and Track**,1977 **Emotion Measurement** Herbert L. Meiselman,2021-04-09 Emotion Measurement Second Edition highlights key elements of emotions that should be considered in the measurement of emotions in both academic and commercial environments This edition begins with an updated review of basic studies of emotion including the theory physiology and psychology of emotions as these are the foundational studies which food scientists as well as product developers and

marketing professionals need to be aware of The second section highlights methods for studying emotions and reviews the different approaches to emotion measurement questionnaire self report behavioral and physiological This section explores the merits of intrinsic versus extrinsic measures of emotion Some new measurement approaches have emerged since the first edition of this book The book then presents practical applications with chapters on emotion research in food and beverage as well as in a range of products and clinical settings The experience in testing product emotions has increased since the first edition when product emotion research was newer Finally Emotion Measurement Second Edition provides coverage of cross cultural research on emotions This is critical because much of the newer commercial research is aimed at markets around the world requiring methods that work in many cultures And the universality of emotions has been a topic of research for decades Taking both an academic and applied approach Emotion Measurement Second Edition will be an invaluable reference for those conducting basic academic research on emotions and for sensory and consumer scientists and the product developers and marketing professionals they work alongside Reviews both the academic and the applied strands of emotion measurement research Focuses on cross cultural studies of emotions which is currently lacking from most of the literature in the field Highlights methods for studying emotions in both basic and applied studies **Recommender**

Global Challenges in Maritime Security Lisa Otto, 2020-04-21. From pirates to smugglers, migrants to hackers, from stolen fish to smuggled drugs, the sea is becoming a place of increasing importance on the global agenda as criminals use it as a theatre to conduct their crimes unfettered. This volume sets out to provide an introduction to the key issues of pertinence in Maritime Security today. It demonstrates why the sea is a space of great strategic importance and how threats to security at sea have a real impact for people around the world. It examines an array of challenges and threats to security playing out at sea, including illegal, unreported and unregulated fishing, irregular migration, piracy, smuggling of illicit goods and cyber security, while also looking at some of the mechanisms and role players involved in addressing these perils. Each
