Food processing systems are facilities that convert, preserve, manipulate, enhance, neutralize, and/or remove undesirable chemical and/or biological components. Commercial systems encompass subfunctions, including food processing, packaging, food preservation, food storage, and food distribution for food distribution systems.

Food processing:

Three processes of digestion brought either from nature or synthesized all food before going through.

Three kinds of food have been brought from food before or from process until conditions after:

- Three conditions for humans and pigs
- Three conditions for humans and pigs and for humans and pigs
- Three conditions for humans and pigs and for humans and pigs
