Principles of Development Lewis Wolpert, Cheryll Tickle, Alfonso Martinez Arias, 2015 Developmental biology is at the core of all biology. This text emphasises the principles and key developments in order to provide an approach and style that will appeal to students at all levels.

Cell Boundaries Stephen White, Gunnar von Heijne, Donald Engelman, 2021-12-31 The central themes of Cell Boundaries concern the structural and organizational principles underlying cell membranes and how these principles enable function. By building a biological and biophysical foundation for understanding the organization of lipids in bilayers and the folding assembly stability and function of membrane proteins, the book aims to broaden the knowledge of bioscience students to include the basic physics and physical chemistry that inform us about membranes. In doing so, it is hoped that physics students will find familiar territory that will lead them to an interest in biology. Our progress toward understanding membranes and membrane proteins depends strongly upon the concerted use of both biology and physics. It is important for students to know not only what we know but how we have come to know it, so Cell Boundaries endeavours to bring out the history behind the central discoveries, especially in the early chapters where the foundation is laid for later chapters. Science is far more interesting if, as students, we can appreciate and share in the adventures and misadventures of discovering new scientific knowledge. Cell Boundaries was written with advanced undergraduates and beginning graduate students in the biological and physical sciences in mind, though this textbook will likely have appeal to researchers and other academics as well. Highlights the history of important central discoveries. Early chapters lay the foundation for later chapters to build on, so knowledge is amassed. High quality line diagrams illustrate key concepts and illuminate molecular mechanisms. Box features and spreads expand on topics in main text, including histories of discoveries, special techniques and applications.
