The Science of Human Perfection Nathaniel Comfort, 2012-09-25 Almost daily we hear news stories advertisements and scientific reports that promise genetic medicine will make us live longer enable doctors to identify

and treat diseases before they start and individualize our medical care But surprisingly a century ago eugenicists were making the same promises The Science of Human Perfection traces the history of the promises of medical genetics and of the medical dimension of eugenics The book also considers social and ethical issues that cast troublesome shadows over these fields

Keeping his focus on America science historian Nathaniel Comfort introduces the community of scientists physicians and public health workers who have contributed to the development of medical genetics from the nineteenth century to today He argues that medical genetics is closely related to eugenics and indeed the two cannot be fully understood separately He also carefully examines how the desire to relieve suffering and to improve ourselves genetically though noble may be subverted History makes clear that as patients and consumers we must take ownership of genetic medicine using it intelligently knowledgeably and skeptically lest pernicious interests trump our own

A Culture of Improvement Robert Friedel, 2010-02-26 How technological change in the West has been driven by the pursuit of improvement a history of technology from plows and printing presses to penicillin the atomic bomb and the computer Why does technology change over time how does it change and what difference does it make In this sweeping ambitious look at a thousand years of Western experience Robert Friedel argues that technological change comes largely through the pursuit of improvement the deep rooted belief that things could be done in a better way What Friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life from tilling fields and raising children to waging war Improvements can be ephemeral or lasting and one person s improvement may not always be viewed as such by others Friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not These processes he emphasizes have created both winners and losers in history Friedel presents a series of narratives of Western technology that begin in the eleventh century and stretch into the twenty first Familiar figures from the history of invention are joined by others the Italian preacher who described the first eyeglasses the dairymen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to Gustav Eiffel Friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle Friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide The most

comprehensive attempt to tell the story of Western technology in many years engagingly written and lavishly illustrated A Culture of Improvement documents the ways in which the drive for improvement has shaped our modern world Index Medicus, 2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings Human Heredity, 1984

Jonsen, 2003-08-28 Bioethics represents a dramatic revision of the centuries old professional ethics that governed the behavior of physicians and their relationships with patients This venerable ethics code was challenged in the years after World War II by the remarkable advances in the biomedical sciences and medicine that raised questions about the definition of death the use of life support systems organ transplantation and reproductive interventions In response philosophers and theologians lawyers and social scientists joined together with physicians and scientists to rethink and revise the old standards Governments established commissions to recommend policies Courts heard arguments and legislatures passed laws This book is the first broad history of the growing field of bioethics Covering the period 1947-1987 it examines the origin and evolution of the debates over human experimentation genetic engineering organ transplantation termination of life sustaining treatment and new reproductive technologies It assesses the contributions of philosophy theology law and the social sciences to the expanding discourse of bioethics Written by one of the field's founders *The Birth of Bioethics* is based on extensive archival research into sources that are difficult to obtain and on interviews with many of the leading figures in

Sex, Race, and Science Edward J. Larson, 1996-10-11 In the first book to explore the theory and practice of eugenics in the American South Edward Larson shows how the quest for strong bloodlines expressed itself in specific state laws and public policies from the Progressive Era through World War II Presenting new evidence of race based and gender based eugenic practices in the past Larson also explores issues that remain controversial today including state control over sexuality and reproduction the rights of disabled persons and of ethnic minorities and the moral and legal questions raised by new discoveries in genetics and medicine Larson shows how the seemingly broad based eugenics movement was in fact a series of distinct campaigns for legislation at the state level campaigns that could often be traced to the efforts of a small group of determined individuals Explaining how these efforts shaped state policies he places them within a broader cultural context by describing the workings of Southern state legislatures the role played by such organizations as women s clubs and the distinctly Southern cultural forces that helped or hindered the implementation of eugenic reforms

Quality Issues in Clinical Genetic Services Ulf Kristoffersson, Jörg Schmidtke, J. J. Cassiman, 2010-06-25 Initially genetic disorders were all considered as rare diseases At

present in the mid of 2009 the OMIM catalogue contains information on more than 12 000 entries of which about 2500 are available for clinical testing based on the identification of the responsible gene defect However altogether it has been estimated that about 8 percent of a population in the economically developed countries will during their lifetime suffer from a disease mainly as the result of their genetic constitution Adding to that it is estimated that all diseases have a genetic component which will determine who will be at a higher than average risk for a certain disorder Further it is postulated that in the near future this genetic profiling could become useful in selecting an appropriate therapy adapted to the genetic constitution of the person Thus genetic disorders are not rare Measuring quality of health care related processes became an issue in the 1990s mainly in laboratory medicine but also for hospitals and other health care systems In many countries national authorities started to implement recommendations guidelines or legal procedures regulating quality of health care delivery In laboratory medicine in parallel the use of accreditation as a method assuring high quality standards in testing came in use With the increasing possibilities of performing molecular genetic testing genetic laboratories needed to become involved in this process As many genetic disorders are rare most laboratories worldwide offered analysis for a specific set of disorders and therefore very early on a transborder flow of samples occurred While international quality criteria ISO have been in existence for a number of years the regulation of quality issues still may differ between countries Based on their personal experience in the varying fields of quality research and clinical implementation of quality criteria in genetic services the authors of thisbook share their experience and give examples of the implementation of quality issues in national quality systems worldwide This book which is the result of the effort of many persons is destined to aid laboratory managers and counsellors health care managers and other stakeholders in national or international health care service to improve the services to the benefit of patients with suspected genetic disorders
