Marcel Danesi,2018-08-11 This book looks at classic puzzles from the perspective of their structures and what they tell us about the brain It uses the work on the neuroscience of mathematics from Dehaene Butterworth Lakoff Nez and many others as a lens to understand the ways in which puzzles reflect imaginative processes blended with rational ones The book is not about recreational or puzzle based mathematics in and of itself but rather about what the classic puzzles tell us about the mathematical imagination and its impact on the discipline It delves into the history of classic math puzzles deconstructing their raison d'être and describing their psychological features so that their nature can be fleshed out in order to help understand the mathematical mind This volume is the first monographic treatment of the psychological nature of puzzles in mathematics With its user friendly technical level of discussion it is of interest to both general readers and those who engage in the disciplines of mathematics psychology neuroscience and or anthropology It is also ideal as a textbook source for courses in recreational mathematics or as reference material in introductory college math courses **Rediscovering**
