CASE REMOVAL

When removing or splitting casts, an electric cast saw or cast cutter is used. The typical cast saw blade does not move in full circular revolutions. The blade on the saw oscillates, or moves back and forth. When using this oscillating function properly, the blade can gently be applied directly to the skin without cutting the skin. Because of the blade's back and forth movement, it can move the skin back and forth as well without cutting, if the skin is soft and supple and gentle pressure is used. Demonstrating this may ease the apprehensions of nervous patients.

The cutting technique is to apply the blade to the cast and gently push it into the cast, and then proceed to cut along the cast in an "up and down" or an "in and out" motion, progressively extending the initial cut into a straight line. To facilitate the "in and out" motion, use the thumb or index finger to stabilize the hand and saw on the cast (See Figure 1.1, Cutting Technique).

Then, cut "in" the cast and use the thumb/finger as a counter force to lift "out." Use this oscillating technique instead of rubbing at the cast without a controlled counter force. Figures 1-3, 1-2, 1-3, 1-4 use thumb/finger as counterforce. The most dangerous technique is to push the blade into the cast and drag it through the casting area without regard to the "in-and-out" technique. This negates the intended function of the oscillating blade. NEVER drag the blade through the cast!

Abstract

This illustration demonstrates the up and down or in and out techniques for safely opening the cast saw. NEVER run the blade across the cast.

Splinting Manual For Pda:

Manual of Neonatal Respiratory Care Steven M. Donn, Mark C. Mammel, Anton H.L.C. van Kaam, 2022-05-09

Respiratory care is the largest overall component of neonatal intensive care and the fifth edition of the Manual of Neonatal Respiratory Care is the leading bedside guide for all aspects of respiratory care in the neonatal intensive care unit. Its easy-to-read outline format is simple yet comprehensive and covers all aspects of lung disease in the newborn infant including embryology, principles of mechanical ventilation, procedures and techniques, monitoring devices, adjunctive therapies, management of respiratory illness, complications, outcomes, and related issues. The latest edition includes fully revised and updated information, coverage on new equipment and devices, and an expanded authorship to enhance its international appeal. The new edition also features two new co-editors, Dr. Mark Mammel and Dr. Anton Van Kaam, internationally recognized experts in the field who bring a fresh perspective to the manual. Divided into sixteen sections, the book begins with a section on lung development and maldevelopment, specifically covering the development of the respiratory system, malformations, deformations, disorders of the neonatal airway, and developmental lung anomalies. The second section reviews the principles of mechanical ventilation, with coverage on such topics as spontaneous breathing, oxygen therapy, oxygen toxicity, pulmonary mechanics, and ventilator parameters. The third section of the manual outlines procedures and techniques, including neonatal resuscitation, laryngoscopy, and endotracheal intubation and tracheostomy. The following section dives into the monitoring of the ventilated patient, specifically focusing on continuous monitoring techniques, clinical controversies in pulse oximetry, and echocardiography. The next section spotlights noninvasive ventilatory techniques, such as nasal interfaces, humidified high-flow nasal cannula therapy, and sustained inflation. The sixth section of the manual focuses on ventilatory modes and modalities, with coverage on intermittent mandatory ventilation, pressure support ventilation, and pressure control ventilation. The following section segues into high-frequency ventilation, reviewing general concepts, high-frequency jet ventilation, and high-frequency oscillatory ventilation. The eighth section centers around commonly used neonatal ventilators, such as the Draeger VN500 ventilator, the AVEA ventilator, and the Twinstream ventilator. The ninth section reviews adjunctive therapies, including hemodynamic support, nutritional support, the use of sedation and analgesia, inhaled nitric oxide therapy, and ECMO. The tenth section shifts gears to spotlight the management of common neonatal respiratory diseases, with chapters on mechanisms of respiratory failure, tissue hypoxia, respiratory distress syndrome, persistent pulmonary hypertension, and pulmonary hypoplasia, among others. Section eleven reviews the etiology, pathogenesis, and management of bronchopulmonary dysplasia, as well as the long-term outcome of newborns with this chronic lung disease. The next section presents complications associated with mechanical ventilation, such as thoracic air leaks, neonatal pulmonary hemorrhage, and neurologic complications. The following two sections spotlight ethical, legal, and other considerations, among them nursing care of the ventilated infant, long-term ventilator dependency, and home ventilation.

withdrawal of ventilatory support and medical liability and risk management The fifteenth section focuses on research and literature with coverage on interpreting medical literature data collection and assessment of respiratory outcomes and contemporary classics in neonatal respiratory care The final section presents ventilatory case studies The text also features over 300 high yield radiographic images figures tables and algorithms *Advanced Emergency Medical Technician Transition Manual* American Academy of Orthopaedic Surgeons (AAOS),,,AAOS,Rhonda Hunt,2013-06-19 The ideal resource for states needing to transition practicing EMT Intermediates to the new AEMT level Advanced Emergency Medical Technician Transition Manual bridges the gap between the knowledge and skills based on the 1985 National Standard Curriculum and those in the 2009 National EMS Education Standards Advanced Emergency Medical Technician Transition Manual offers focused discussions on critical knowledge areas and new skills Each chapter opens with a summary of what EMTs should already know about the topic as well as a brief overview of the content that is new or addressed in greater depth in the National EMS Education Standards Case studies at the end of each chapter help students test their critical thinking skills and gauge comprehension This concise program can be used for continuing education or bridge courses to the National EMS Education Standards Listen to a Podcast with AEMT Transition Manual author Rhonda Beck to learn more about this training program Listen now http://d2jw81rkebrcvk.cloudfront.net/assets/multimedia/audio/Beck_AEMT.mp3
