not yet completely known we do have good insight into the functional processing performed by the human mind On the basis
of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of
artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve
problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are
useful for solving problems in well understood domains with relatively stable environments the approach may fail when the
domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data
