P. Bowkett,2023-10-20 If you love science fiction like Doctor Who and Star Trek but also enjoy coming of age tales like Heartstopper this book is for you Max Janus has made many mistakes since first coming to Earth during the peak of the Roman Empire to chase down alien criminals called Deceptors Things take an unexpected twist when an accident whilst chasing a female Deceptor in 21st Century London results in him waking up inside the body of a 17 year old boy Despite Max transmuting inside a new host every 30 years or so he has become set in his ways He has relied on generations of the same family of doctors to be his next host as they reach thirty years of age so finding himself having to deal with the emotional rollercoaster of a teenager struggling with exams driving lessons and his sexuality is sure to cause mayhem When Bobby Morris sees an old man knocked over in Piccadilly Circus he couldn t have imagined how much his life was about to be disrupted Suddenly finding he will be spending the next six months hosting a centuries old alien until it can build a new human body shell is bad enough but finding out that this alien s past has put the lives of his friends and family at risk leaves him with little choice but to join in the battle Sci fi action and adventure trade places as Bobby s alien body lodger is revealed to his friends who agree to support him on the quest to uncover who that Deceptor is and why the police seem to be helping the Deceptor Max and the Hidden Visitor appeals to anyone who loves science fiction and coming of age stories in an action packed page turning adventure for ages 12 to 99 It is book one in the series but each book can be enjoyed on its own **Visitors** Harold A. Skaarup,2000-09-04 Suppose you could communicate with a visitor who was not from this place time space or even this dimension What would you want to ask

them The answers probably lie in what our own response would be if we were them This book is based on a collection of interviews I have had with a few individuals who may have actually had such an experience The idea is that if enough of us are ready to ask the questions and gain the answers then our collective knowledge and understanding of the multiverse about us can only continue to be enhanced Sometimes the responses that you will read here are similar often they are diametrically opposed to each other An open but highly skeptical mind is extremely necessary if you are going to sift through the data that is presented in this book The intent is that it should peak your curiosity to learn more about visitors In this way we may be better informed and prepared and thus in some sort of coherent shape to deal with their arrival If you read this book you must be well prepared to choose for yourself what you will or will not believe The Christian world magazine (and family visitor). ,1868 The Monthly Visitor ,1850 **The Friendly Visitor** William Carus Wilson,1860 **Earth A**

the author's unique viewpoint puts a mathematical spin on everything from politicians to hippos. Along the way you will enjoy the different point of view and hopefully it will open you up to a slightly more out of the box way of thinking. Did you know that sometimes $2 + 2$ equals 5? That wheels don't always have to be round? That you can mathematically prove there is a hippopotamus in your basement? Or how to spot four dimensional beings as they pass through your kitchen? If not then you need to read this book. Math Mutation Classics is a collection of Erik Seligman's blog articles from Math Mutation at MathMutation.com. Erik has been creating podcasts and converting them in his blog for many years. Now he has collected what he believes to be the most interesting among them and has edited and organized them into a book that is often thought provoking, challenging and fun. What You Will Learn: View the world and problems in different ways through math. Apply mathematics to things you thought unimaginable. Abstract things that are not taught in school. Who this Book is For: Teenagers, college level students and adults who can gain from the many different ways of looking at problems and feed their interest in mathematics.

Hard Evidence for ET Origins and Visits Scott Campbell, 2022-05-24. In the film Prometheus about traveling to the moon of a distant planet to find our creators, Shaw and Holloway make a presentation on their research to the crew. They assert that they seek answers to the age old questions of where we came from and who we came for, life on Earth. They claim our DNA was engineered by the same advanced alien species they seek on the moon called LV 223. Immediately the biologist on the crew objects saying that they are discounting three hundred years of Darwinism. No, they are not at all. The aliens did not seed the planet with alien babies; they allegedly seeded Earth with DNA that we assume was combined into microbes and helped to evolve life as we know it. This would demand all the Darwinian principles of evolution. In this case, evolution on Earth did not create DNA itself, the backbone of life, just the life derived from it. It turns out there is hard scientific evidence to support the panspermia hypothesis. One line of evidence lies in our biological evolution and especially that of microbes as the precursors to complex life. It suggests that microbes with DNA came from off planet to kick start life on Earth. Another line of evidence shows that our genetic coding itself, in all probability, was in fact designed and bears signatures saying so. Our genetic coding boasts nine prime numbers as a signature, a statistical chance of being natural at one in ten trillion. In other words, its ten trillion to one that we were genetically engineered. When we combine the two, that our DNA arose from sophisticated genetic engineering and that our microbe evolution suggests alien donors of DNA to take the lead in creating life, then we can make a good case that we are of alien origin. Another line of documented evidence that we are not alone lies with a very small interstellar visitor that zipped through our solar system in 2017. We only had eleven days to gather data on Oumuamua. It was thin, showed evidence of being metallic, was propelled by a force assumed to be the sun, and had so many unique properties that Harvard astronomer Avi Loeb said that rather than a comet or asteroid, it was a work of technology. According to Dr. Loeb, it was most likely some sort of light sail. His hypothesis and book on the subject shook up the scientific world.
