Quinolines, Volume 32, Part 1 Gurnos Jones, 2009-09-15 The Chemistry of Heterocyclic Compounds since its inception has been recognized as a cornerstone of heterocyclic chemistry Each volume attempts to discuss all aspects properties synthesis reactions physiological and industrial significance of a specific ring system To keep the series up to date supplementary volumes covering the recent literature on each individual ring system have been published Many ring systems such as pyridines and oxazoles are treated in distinct books each consisting of separate volumes or parts dealing with different individual topics With all authors are recognized authorities the Chemistry of Heterocyclic Chemistry is considered worldwide as the indispensable resource for organic bioorganic and medicinal chemists

Comprehensive Organic Functional Group Transformations Alan R. Katritzky, Gordon W. Kirby, Otto Meth-Cohn, Charles Wayne Rees, 2003-03-21 In this Volume containing 24 chapters devoted to carbon attached by single bonds to two heteroatoms the reader will find several chapters reviewing the synthesis of familiar functional groups notably acetals dithioacetals amins and the various mixed species The derivatives with tetracoordinated saturated carbon are described in Part I and those eg ketene acetals of tricoordinated carbon in Part II However the treatment is comprehensive and the authors have uncovered much fascinating chemistry concerning less familiar groups including some like geminal halohydrins halo amines and diols that are often unstable Again a surprisingly large number of compounds having two metals attached to the same carbon have been located in the literature and the abundance of phosphorus derivatives eg those with geminal nitrogen functions reflects their importance as biologically active species and as intermediates in synthesis Part III consists of a single short chapter describing dicoordinate carbon carbenes and examples of carbon cations anions and radicals Here the treatment is deliberately selective since throughout the work as a whole emphasis is placed on the synthesis of isolable species rather than the transient intermediates of organic reactions
