Certain mining operations require an open top rectangular container to transport materials. The data for the problem are as follows:

Construction costs:

- Sides: \$50/m²
- Ends: \$60/m<sup>2</sup>
- Bottom: \$90/m<sup>2</sup>

Minimum volume needed: 150 m<sup>3</sup>

Formulate the problem of determining the container dimensions for minimum present cost.

#### Solution

- Given: The construction costs for the sides, ends, and the bottom of the container and the minimum volume requirement.
- **Required:** It is desired to find the dimensions of the material container which minimize cost. **Procedure:** We follow the five step process to formulate the problem as an optimization problem.

#### Step 1: Problem Statement

Shown above

#### Step 2: Data and Information Collection

Shown above

#### Step 3: Definition of Design Variables

dimensions of the container:

b = width, m

d = depth, m

h = height, m

#### Step 4: Optimization Criterion

Optimization criterion is to minimize total present cost, and the cost function is defined as

$$Cost = \left[ 2dh(50) + 2bh(60) + bd(90) \right]$$

Cost = (100dh + 120bh + 90bd)

#### Step 5: Formulation of Constraints

Volume Constraint:

 $bdh \ge 150$ , m<sup>3</sup>

Explicit Design Variable Constraints:

 $b \ge 0$ , m;  $d \ge 0$ , m;  $h \ge 0$ , m

The interdisciplinary nature of the workshop and the wide range of subdisciplines represented by the partici pants enabled an exchange of valuable information and also led to significant dis cussions about multidisciplinary optimization issues One of the goals of the work shop was to include laboratory industrial and academic researchers so that analyses algorithms implementations

and applications could all be well represented in the talks this interdisciplinary nature is reflected in these proceedings An overriding impression that can be gleaned from the papers in this volume is the complexity of problems addressed by not only those authors engaged in appli cations but also by those engaged in algorithmic development and even mathemat ical analyses Thus in many instances systematic approaches using fully nonlin ear constraint equations are routinely used to solve control and optimization problems in some cases replacing ad hoc or empirically based procedures **Solutions Manual** to Accompany Introduction to Bioengineering Stanley A. Berger, E. R. Lewis, E. W. Goldsmith, 2000 This is a solutions manual available free to adopters of the textbook Introduction to Bioengineering The parent text contains answers to problems at the end of the book This solutions manual contains detailed worked through solutions to most of the problems in the parent book written by the authors of the relevant chapters in the main text The scope of the parent text which covers a wide spectrum of topics means that few lecturers will be expert in all the areas discussed so detailed solutions will be welcomed Frontier Technologies for Infrastructures Engineering Alfredo H.S.
