Construction Matters Stefan Holzer, Silke Langenberg, Clemens Knobling, Orkun Kasap, 2025-03-04 Construction History Construction Heritage Recent Construction Historiography Industrialization Engineering Sciences Building Materials Building Actors Construction History is still a fairly new and small but quickly evolving field The current trends in Construction History are well reflected in the papers of the present conference Construction History has strong roots in the historiography of the 19th century and the evolution of industrialization but the focus of our research field has meanwhile shifted notably to include more recent and also more distant histories as well This is reflected in these conference proceedings where 65 out of 148 contributed papers deal with the built heritage or building actors of the 20th or 21st century The conference also mirrors the wide spectrum of documentary and analytical approaches comprised within the discipline of Construction History Papers dealing with the technical and functional analysis of specific buildings or building types are complemented by other studies focusing on the lives and formation of building actors from laborers to architects and engineers from economical aspects to social and political implications on legal aspects and the strong ties between the history of construction and the history of engineering sciences The conference integrates perfectly into the daily work at the Institute for Preservation and Construction History at ETH Zurich Its two chairs the Chair for Building Archaeology and Construction History and the Chair for Construction Heritage and Preservation endeavor to cover the entire field and to bridge the gaps between the different approaches methodologies and disciplines between various centuries as well as technologies learning together and from each other The proceedings of 8ICCH give a representative picture of the state of the art in the field and will serve as a reference point for future studies

Genetics and Regulation of Nitrogen Fixation in Free-Living Bacteria Werner Klipp, Bernd Masepohl, John R. Gallon, William E. Newton, 2006-01-28 Genetics and Regulation of Nitrogen Fixing Bacteria This book is the second volume of a seven volume series which covers all fields of research related to nitrogen fixation from basic studies through applied aspects to environmental impacts Volume II provides a comprehensive and detailed source of information concerning the genetics and regulation of biological nitrogen fixation in free living prokaryotes This preface attempts to provide the reader with some insight into how this volume originated how it was planned and then how it developed over the several years of its production Once the editorial team was established the first job was to decide which of the many free living diazotrophs that have been subjected to genetic analysis should be included in this volume Would we need to develop specific criteria for selection or would the organisms in effect select themselves Of course *Klebsiella pneumoniae* and *Azotobacter vinelandii* which have served and still serve as the main model organisms for the genetic analysis of diazotrophy plus some of the other bacteria described in this volume did indeed select themselves However there was considerable discussion surrounding well characterized fixing species like *Azorhizobium caulinodans* and *Herbaspirillum seropedicae* both of which are able to fix atmospheric N under free living conditions

characterized by the key phrases of data driven society and knowledge intensive society Offers a firm foundation and understanding of recent advancements in various domains such as data analytics neural networks computer vision and robotics along with practical solutions to existing problems in fields such as healthcare manufacturing industries security and infrastructure management *Effects of cell interactions at the endothelium in leukocyte differentiation and polarization during inflammation* Alain Haziot, Dan Jane-wit, Efsthios G. Stamatiades, 2023-11-27 A complex exchange of signals between endothelial cells and tissues occurs during steady state and in inflammatory conditions These interactions involve numerous cell types including an active contribution from endothelial cells and occur on both sides of the endothelial monolayer In addition to functioning as selective permeability barriers it is increasingly recognized that local cell attraction to endothelial cells provides the potential for focal interactions between relevant cells In this context cellular interactions taking place at the surface of the endothelium and within the perivascular spaces are thought to initiate crucial steps in the generation and shaping of immune responses Blood elements such as leukocytes platelets and vesicles converge to the barrier formed by the endothelium where perivascular such as macrophages pericytes initiate convey and or amplify signals revealing tissue status The innate and adaptative functions of endothelial cells themselves together with the immune functions of assembled cells at a focal point in capillaries create the potential for exchange of signals and dynamic fine tuning of responses through cell programming and cell selection The resulting immune response may range from inadequate immunity and or exhaustion to excess tissue destruction and fibrosis Productive inflammation and its resolution are critically reliant on which cells are recruited and in which order their state of activation and interactions between recruited cells Tissue dependent signals further shape the recruitment of leukocytes to the endothelium In the kidney for instance in the presence of immune complexes perivascular resident macrophages located in subendothelial spaces coupled with endothelial cells induce monocyte and neutrophil tissue infiltration operating therefore as an anatomical and functional unit The goals of this Research Topic are i to analyze how signal integration and partnering of cell types in transendothelial migration contribute to the development of tissue inflammation and how responses are geared towards specific profiles of reactions to injury ii how the interplay between cell types including but not limited to endothelial cells monocytes resident macrophages and T and B cells dynamically governs the immune responses that take place in the tissue iii in which way do integrative capacities of endothelial and subendothelial cells shape and coordinate the successive recruitment of leukocyte populations
