Marine Hydrodynamics, 40th anniversary edition J. N. Newman, 2018-01-26 A textbook that offers a unified treatment of the applications of hydrodynamics to marine problems The applications of hydrodynamics to naval architecture and marine engineering expanded dramatically in the 1960s and 1970s This classic textbook originally published in 1977 filled the need for a single volume on the applications of hydrodynamics to marine problems The book is solidly based on fundamentals but it also guides the student to an understanding of engineering applications through its consideration of realistic configurations The book takes a balanced approach between theory and empirics providing the necessary theoretical background for an intelligent evaluation and application of empirical procedures It also serves as an introduction to more specialized research methods It unifies the seemingly diverse problems of marine hydrodynamics by examining them not as separate problems but as related applications of the general field of hydrodynamics The book evolved from a first year graduate course in MIT's Department of Ocean Engineering A knowledge of advanced calculus is assumed Students will find a previous introductory course in fluid dynamics helpful but the book presents the necessary fundamentals in a self contained manner The 40th anniversary of this

pioneering book offers a foreword by John Grue Contents Model Testing The Motion of a Viscous Fluid The Motion of an Ideal Fluid Lifting Surfaces Waves and Wave Effects Hydrodynamics of Slender Bodies Eco-Materials and Green Energy for a Sustainable Future Amit Soni,Dharmendra Tripathi,Jagrati Sahariya,Kamal Nayan Sharma,2024-11-25 Eco Materials and Green Energy for a Sustainable Future emphasizes the synergy between eco materials and green energy solutions highlighting their combined power to reduce carbon emissions conserve resources and create a more resilient and sustainable future It provides a detailed discussion on cutting edge green energy technologies and their potential to transform the energy landscape Covering a range of applications and emerging technologies that are moving toward sustainable and green energy this book includes topics on nano batteries nanoparticle treatments of toxic textile industry wastewater and green building materials It explores thin film solar cells and luminescent materials in solar energy This book considers green synthesis methods such as plant extracts and microorganisms with applications in regenerative medicine This book will interest researchers and senior undergraduate and graduate students studying renewable energy sources green materials engineering and chemistry and sustainability *WCFS2019* Chien Ming Wang,Soon Heng Lim,Zhi Yung Tay,2019-07-17 This book highlights recent research and developments in floating structures on rivers lakes seas and oceans for energy harvesting aquaculture and farming leisure activities infrastructure industrial plants real estate and cities with a focus on sustainably living relaxing and working offshore Bringing together international experts and leaders from both industry and academia it reviews and discusses ocean space utilization and offers an ideal platform for those wanting to establish new collaborations on floating structure projects **The Proceedings** Ronald W.
