The problems test both the student's understanding of each topic and their ability to apply this understanding concretely. Solutions to the problems are provided in detail, eliminating only the simplest steps. No problem has been included that requires knowledge of mathematical methods not covered in standard courses such as Fuchsian differential equations. The book is in particular designed to assist all students who are preparing for written examinations in Quantum Mechanics but will also be very useful for teachers who have to pose problems to their students in lessons and examinations.

*Mathematical Computation with Maple V: Ideas and Applications* Thomas Lee, 2012-12-06 Developments in both computer hardware and software over the decades have fundamentally changed the education community. Today it is nearly impossible to find a college or university that has not introduced mathematical computation in from new tools and techniques that have allowed some form into the curriculum. Students now have to be more efficient, accurate, and creative. They have regular access to the amount of computational power that were available to a very exclusive set of researchers five years ago. This Maple V and the new generation of mathematical has produced tremendous pedagogical computation systems have the potential of challenges and opportunities having the same kind of revolutionary impact as high level general purpose programming. Comparisons to the calculator revolution of the languages e.g. FORTRAN, BASIC, C, 70's are inescapable. Calculators have application software e.g. spreadsheets extended the average person's ability to solve. Computer Aided Design (CAD) and even common problems more efficiently and calculators have had Maple V has amplified our arguably in better ways. Today one needs at mathematical abilities we can solve more than a calculator to deal with standard problems more accurately and more often.
