publication of Bachelier s thesis which together with Harry Markovitz Ph D dissertation on portfolio selection in 1952 and Fischer Black s and Myron Scholes solution of an option pricing problem in 1973 is considered as the starting point of modern finance as a mathematical discipline On this remarkable anniversary the workshop on mathematical finance held at the University of Konstanz brought together practitioners economists and mathematicians to discuss the state of the art Apart from contributions to the known discrete Brownian and Lvy process models first attempts to describe a market in a reasonable way by a fractional Brownian motion model are presented opening many new aspects for practitioners and new problems for mathematicians As most dynamical financial problems are stochastic filtering or control problems many talks presented adaptations of control methods and techniques to the classical financial problems in portfolio selection irreversible

investment risk sensitive asset allocation capital asset pricing hedging contingent claims option pricing interest rate theory  
The contributions of practitioners link the theoretical results to the steadily increasing flow of real world problems from financial institutions into mathematical laboratories The present volume reflects this exchange of theoretical and applied results methods and techniques that made the workshop a fruitful contribution to the interdisciplinary work in mathematical finance     RealTime Physics: Active Learning Laboratories, Module 3 David R.
