The Mollification Method and the Numerical Solution of Ill-Posed Problems Diego A. Murio, 1993-07-30 Over the past twenty years the subject of applied inverse theory ill posed problems has expanded from a collection of individual techniques to a rich highly developed branch of applied mathematics The Mollification Method and the Numerical Solution of Ill Posed Problems offers a self contained introduction to several of the most important practical computational methods that have been successfully applied to a wide range of ill posed problems The book examines the mollification method and its multiple applications when used as a space marching method These computations are compared with various other methods used to arrive at the same numerical results Of special interest is a novel treatment of the two dimensional inverse heat conduction problem on a bounded domain There is a strong emphasis on computation supplemented by numerous exercises examples and illustrations Unlike most books on ill posed problems this volume contains all the motivations proofs algorithms and exercises necessary to fully understand the subject Materials are presented in clear simple language to make the subject accessible to readers with little or no background in ill posed problems For nonmathematicians an overview of essential mathematical tools is contained in an appendix References at the end of each chapter are supplemented with comments by the author and a second appendix offers up to date citations of literature on the inverse heat conduction problem to aid readers in further research An excellent text for upper level undergraduate or first year graduate courses on computational methods for inverse ill posed problems this book will also serve as a valuable reference work for professionals interested in modeling inverse phenomena

N. P. Bali, Dr. Manish Goyal, C. P. Gandhi, 2010      **Numerical Mathematics and Advanced Applications** Miloslav  
Feistauer, Vit Dolejší, Peter Knobloch, Karel Najzar, 2012-12-06 These proceedings collect the major part of the lectures given  
at ENU MATH2003 the European Conference on Numerical Mathematics and Advanced Applications held in Prague Czech  
Republic from 18 August to 22 August 2003 The importance of numerical and computational mathematics and scientific  
computing is permanently growing There is an increasing number of different research areas where numerical simulation is  
necessary Let us mention fluid dynamics continuum mechanics electromagnetism phase transition cosmology medicine  
economics finance etc The success of applications of numerical methods is conditioned by changing its basic instruments and  
looking for new appropriate techniques adapted to new problems as well as new computer architectures The ENUMATH  
conferences were established in order to provide a forum for discussion of current topics of numerical mathematics They  
seek to convene leading experts and young scientists with special emphasis on contributions from Europe Recent results and  
new trends are discussed in the analysis of numerical algorithms as well as in their applications to challenging scientific and  
industrial problems The first ENUMATH conference was organized in Paris in 1995 then the series continued by the  
conferences in Heidelberg 1997 Jyväskylä 1999 and Ischia Porto 2001 It was a great pleasure and honour for the Czech  
numerical community that it was decided at Ischia Porto to organize the ENUMATH2003 in Prague It was the first time when  
this conference crossed the former Iron Curtain and was organized in a postsocialist country      *Applied Mechanics*
