**Metacognition in Learning** Nosisi Feza,2019-12-11 Metacognition skills have been proven to have a positive relationship with learning The strength of metacognition relies heavily on self efficacy where a student understands his her learning style and the ability to use information gathered and align it with his her learning style In addition knowing what you know and how you know it as a student plays a huge role in knowing what you do not know and linking it with what is close or relevant to it that you know It is about having skills and knowledge that empowers you to be an independent learner Literature on classroom practices show a number of short comings in diverse areas such as poor teacher knowledge overcrowded classrooms and lack of resources for learning An independent student will strive under such an environment by studying independently searching for resources and finding multimodal ways of learning It is also important to note that naturally human beings are curious and want to learn in order to conquer their world Hence Piaget s work of intellectual autonomy cannot be ignored when exploring metacognition If learning experiences were ideal and developmental they would be no need to nurture metacognition Unfortunately the education systems remove students curiosity by bringing fake environments into learning that impede creation and imagination This book emphasises the power of metacognition at different levels of learning It can be seen as a parallel intervention approach with expanded knowledge on how to extend existing skills for young children which is a pre intervention Authors in this book bring diverse viewpoints from diverse fields on how to nurture metacognition thus giving the reader an opportunity to borrow strategies from other fields This contribution is a mixture of empirical contributions and opinion pieces informed by review of literature
