2000 LEVEL SYSTEM

First Ethernet-based control for managing a large lighting system

Take advantage of your building's existing Ethernet backbone and its open architecture and share data between controllers at blistering speed. 2000 level systems are ideal for larger commercial and industrial buildings where the information from a local control device such as a photo sensor or switch is used to control branch breakers located in several different panels scattered throughout the facility.

Enhance the capabilities of a 2000 level system by adding:

- Ethernet port for peer-to-peer Ethernet communication using Modbus/TCP protocol
- Ability to share remote status (input commands, time schedules, or zone status) with up to 255 other controllers
- Remote sensor capability for mapping up to four local or remotely located sensors (input commands, time schedules, or zone status) with a single zone
- Network time synchronization service for coordinating controller time reference with a centralized time server
- Configurable alarm generation for logging nonresponding breakers and other operational parameters (accessible through PC software)

2000 LEVEL SYSTEM

High-resolution control for controlling and managing the cost of the lighting system

The 2000 level system forms the foundation for a completely high-resolution lighting control system. From the convenience of a standard Web browser, users can easily access information about the lighting control system, initiate overrides, or make a schedule change without having to modify the schedule in each panel.

- Includes the most powerful features of a 2000 level system
- Integrated Web server to provide ready access to panel status and configuration screens
- Email alarm notification service for automatically notifying assigned users of an alarm condition through their computer e-mail program, pager, or cell phone
- Seamless coordination with Powerlink® network area controllers (NACs) to provide a host of special control capabilities including automatic load identification, stepped dimming, demand control, and integration with other equipment
- Extends functionality of Powerlink K2 system to communicate with Square D® Cbus® devices

2000 level controllers support Ethernet® Ethernet communications. Easily connect to your existing building network.
