Air Quality Control G. Baumbach,2012-12-06 Air quality and air pollution control are tasks of international concern as for one air pollutants do not refrain from crossing borders and for another industrial plants and

motor vehicles which emit air pollutants are in widespread use today In a number of the world's expanding cities smog situations are a frequent occurrence due to the number and emission intensity of air pollution sources Polluted air causes annoyances and can when it occurs in high concentrations in these cities constitute a serious health hazard How important clean air is to life becomes apparent when considering the fact that humans can do without food for up to 40 days without air however only a few minutes The first step towards improving the air quality situation is the awareness that a sound environment is as much to be aspired for as the development of new technologies improving the standard of living Technical progress should be judged especially by how environmentally benign clean and noiseless its products are Of these elements clean air is of special concern to me I hope that this book will awaken more interest in this matter and that it will lead to new impulses Due to the increasing complexity of today's machinery and industrial processes science and technology can no longer do without highly specialized design engineers and operators Environmental processes however are highly interdependent and interlinked
