Shakespeare and Abraham Ken Jackson, 2015-03-15 In *Shakespeare and Abraham* Ken Jackson illuminates William Shakespeare s dramatic fascination with the story of Abraham s near sacrifice of his son Isaac in Genesis 22 Themes of child killing fill Shakespeare s early plays Genesis 22 informed Clifford s attack on young Rutland in 3 Henry 6 Hubert s providentially thwarted murder of Arthur in King John and Aaron the Moor s surprising decision to spare his son amidst the filial slaughters of Titus Andronicus among others However the playwright s full engagement with the biblical narrative does not manifest itself exclusively in scenes involving the sacrifice of children or in verbal borrowings from the famously sparse story of Abraham Jackson argues that the most important influence of Genesis 22 and its interpretive tradition is to be found in the conceptual framework that Shakespeare develops to explore relationships among ideas of religion sovereignty law and justice Jackson probes the Shakespearean texts from the vantage of modern theology and critical theory while also orienting them toward the traditions concerning Abraham in Jewish Pauline patristic medieval and Reformation sources and early English drama Consequently the playwright s Abrahamic explorations become strikingly apparent in unexpected places such as the trial of Shylock in *The Merchant of Venice* and the bifurcated structure of *Timon of Athens* By situating Shakespeare in a complex genealogy that extends from ancient religion to postmodern philosophy Jackson inserts Shakespeare into the larger contemporary conversation about religion in the modern world

Endoplasmic Reticulum Stress Response and Transcriptional Reprogramming Kezhong Zhang, 2015 Endoplasmic reticulum ER is an intracellular organelle responsible for protein folding and assembly lipid and sterol biosynthesis and calcium storage A number of biochemical physiological or pathological stimuli can interrupt protein folding process causing accumulation of unfolded or misfolded proteins in the ER lumen a condition called ER stress To cope with accumulation of unfolded or misfolded proteins the ER has evolved a group of signaling pathways termed Unfolded Protein Response UPR or ER stress response to align cellular

physiology To maintain ER homeostasis transcriptional regulation mediated through multiple UPR branches is orchestrated to increase ER folding capacity reduce ER workload and promote degradation of misfolded proteins In recent years accumulating evidence suggests that ER stress triggered transcriptional reprogramming exists in many pathophysiological processes and plays fundamental roles in the initiation and progression of a variety of diseases such as metabolic disease cardiovascular disease neurodegenerative disease and cancer Understanding effects and mechanisms of ER stress associated transcriptional reprogramming has high impact on many areas of molecular genetics and will be particularly informative to the development of pharmacologic avenues towards the prevention and treatment of modern common human diseases by targeting the UPR signaling For these reasons ER stress response and transcriptional reprogramming are a timely and necessary topic of discussion for *Frontiers in Genetics* The important topics in this area include but not limited to 1 ER resident transcription factors and their involvements in ER stress response and cell physiology 2 Physiologic roles and molecular mechanisms of ER stress associated transcriptional regulation in lipid and glucose metabolism 3 In vitro and in vivo models for ER stress associated transcriptional reprogramming 4 ER stress associated transcriptional regulation in human disease 5 Therapeutic potentials by targeting ER stress response pathways **Monthly Weather Review**, 1984

Viral Infection at the Maternal-Fetal Interface Abhay P. S. Rathore, Vivian Vasconcelos Costa, Ashley L. St John, 2022-02-28 *International Journal of Comparative and Applied Criminal Justice*, 2016 *Violent Games* Gareth Schott, 2016-07-28 It was over a decade ago that experimental psychologists and media effects researchers declared the debate on the effects of violent video gaming as essentially over referring to the way violence in videogames increases aggressive thoughts feelings and behaviors in players Despite the decisive tone of this statement neither the presence nor popularity of digital games has since diminished with games continuing to attract new generations of players to experience its technological advancements in the narration of violence and its techniques of depiction Drawing on new insights achieved from research located at an intersection between humanities social and computer sciences Gareth Schott's addition to the *Approaches in Digital Game Studies* series interrogates the nature and meaning of the violence encountered and experienced by game players In focusing on the various ways violence is mediated by both the rule system and the semiotic layer of games the aim is to draw out the distinctiveness of games exploitation of violence or violent themes An important if not canonical text in the debates about video games and violence *Violent Games* constitutes an essential book for those wishing to make sense of the experience offered by games as technological aesthetic and communicational phenomena in the context of issues of media regulation and the classification of game content as violence *The Importance Of Iron In Pathophysiologic Conditions* Raffaella Gozzelino, Paolo Arosio, 2015-06-09 The iron element Fe is strictly required for the survival of most forms of life including bacteria plants and humans Fine tuned regulatory mechanisms for Fe absorption mobilization and recycling operate to maintain Fe homeostasis the disruption of which leads to Fe overload or Fe depletion

Whereas the deleterious effect of Fe deficiency relies on reduced oxygen transport and diminished activity of Fe dependent enzymes the cytotoxicity induced by Fe overload is due to the ability of this metal to act as a pro oxidant and catalyze the formation of highly reactive hydroxyl radicals via the Fenton chemistry This results in unfettered oxidative stress generation that by inducing protein lipid and DNA oxidation leads to Fe mediated programmed cell death and organ dysfunction Major and systemic Fe overloads occurring in hemochromatosis and Fe loading anemias have been extensively studied However localized tissue Fe overload was recently associated to a variety of pathologies such as infection inflammation cancer cardiovascular and neurodegenerative disorders In keeping with the existence of cross regulatory interactions between Fe homeostasis and the pathophysiology of these diseases further investigations on the mechanisms that provide cellular and systemic adaptation to tissue Fe overload are instrumental for future therapeutic approaches Thus we encourage our colleagues to submit original research papers reviews perspectives methods and technology reports to contribute their findings to a current state of the art on a comprehensive overview of the importance of iron metabolism in pathophysiologic conditions
