**A Guide to Forensic Geology** L.J. Donnelly, D. Pirrie, M. Harrison, A. Ruffell, L.A. Dawson, 2021-08-26 Forensic geology is the application of geology to aid the investigation of crime A Guide to Forensic Geology was written by the International Union of Geological Sciences IUGS Initiative on Forensic Geology IFG which was established to promote and develop forensic geology around the world This book presents the first practical guide for forensic geologists in search and geological trace evidence analysis Guidance is provided on using geological methods during search operations This developed following international case work experiences and research over the last 25 years for homicide graves burials associated with serious and organised crime and counter terrorism With expertise gained in over 300 serious crime investigations the guidance also considers geological trace evidence including the examination of crime scenes geological evidence recovery and analysis from exhibits and the

reporting of results The book also considers the judicial system reporting and requirements for presenting evidence in court Included are emerging applications of geology to police and law enforcement illegal and illicit mining conflict minerals substitution adulteration fraud and fakery

**Soil Pollution and Remediation** Albert Kobina Mensah, 2025-05-19 The process of mineral extraction results in substantial damage of the topsoil which leads to soil degradation in the form of deterioration of the soil structure susceptibility to soil erosion excessive leaching of nutrients soil compaction decrease in soil pH accumulation of heavy metals in soil depletion of organic matter reduced accessibility of nutrients for plants diminished capacity for cation exchange the decline in microbial activity and ultimately a consequent decline in soil fertility Effective management of topsoil is indispensable in the execution of a reclamation strategy as it serves to minimize nutrient depletion and ultimately expedite the process of restoring soil health and quality Ghana is among the top ten gold producing countries in the world and its actions towards achieving environmental sustainability in the mining sector must be shared with the world There are some great success stories as well as challenges in the mining sector sustainability from Ghana's case which are left undocumented and are limited in investigations in a scientific book Such enviable feats chalked by some mining companies must be documented so that lessons can be borrowed for replications in restoring similar degraded mining sites elsewhere across the globe Additionally companies can learn from the success stories and challenges encountered in mine land reclamation and revegetation in this book Revegetation may present a sustainable option for the reclamation and restoration of mine soil degradation The restoration process involves many strategies aimed at improving the quality of soil such as augmenting the quantity of soil organic matter enhancing nutrient availability increasing cation exchange capacity stimulating biological activities and optimizing the physical qualities of the soil Researchers scientists and consultants in the subject of soil pollution and remediation have conducted a great deal of study using a variety of techniques and approaches However a fragmented reporting of techniques and results has resulted from the documentation and dissemination of success stories challenges and findings mostly through individual technical reports and publication in scholarly journals This book provides an in depth analysis of the many scientific methodologies used to identify environmental risks related to potentially toxic elements PTEs in mining sites and revegetation as a strategy to ameliorating contaminated and degraded mining sites The book covers application of these methods in identifying soil human health risks and planning towards reclamation of such derelict ecosystems The book combines reviews of relevant literature laboratory investigation on PTEs from representative mine contaminated soil and spoil samples as well as appraisal of case studies on successful reclamation and revegetation of mine degraded lands Applications of the total element concentration method size fractionation experiments sequential extraction analyses risk assessment indices geospatial analysis redox chemistry experiments synchrotron radiation science incubation experiments and pot experimental trials in soil remediation works were documented first hand in a single piece in this book The book is organized into nineteen chapters each dedicated to soil contamination

caused by mining and revegetation as a sustainable solution The initial parts of the book deal with various techniques for identifying soil human health risks They include some topics such as the consequences of heavy metal presence and build up the sources from which heavy metal pollutants originate and the possible hazards they bring to plant human and soil health The second parts begin with the concept of mining sector sustainability and explore revegetation as a strategy for reclaiming and remediating mining contaminated lands with the objective of restoring ecosystem functionality improving soil characteristics and cleaning metal contaminated soils The book may serve as a valuable resource for individuals occupying various professional roles and engaging in academic pursuits such as project officers operating within the environmental safety and health divisions of mining enterprises consultants specializing in land reclamation lecturers specializing in environmental and soil sciences students and individuals with a strong interest in environmental protection Ore Deposit Geology John Ridley, 2013-07-04 Mapping closely to how ore deposit geology is now taught this textbook systematically describes and illustrates the major ore deposit types linking this to their settings in the crust and the geological factors behind their formation Written for advanced undergraduate and graduate students with a basic background in the geosciences it provides a balance of practical information and coverage of the relevant geological sciences including petrological geochemical hydrological and tectonic processes Important theory is summarized without unnecessary detail and integrated with students learning in other topics including magmatic processes and sedimentary geology enabling students to make links across the geosciences Students are supported by further reading a comprehensive glossary and problems and review questions that test the application of theoretical approaches and encourage students to use what they have learnt A website includes visual resources and combines with the book to provide students and instructors with a complete learning package Characterization, Prediction and Modelling of the Crustal Present-Day In-Situ Stresses R. Goteti, T. Finkbeiner, M. O. Ziegler, C. Massiot, 2024-08-01 Geomechanics has a marked impact on the safe and sustainable use of the subsurface Along with an ongoing demand for hydrocarbon resources there is also a growing emphasis on sustainable subsurface exploitation and development storage of carbon hydrogen energy and radioactive waste as well as sustainable geothermal resource utilization Such activities are accompanied by an ever increasing need for higher resolution fit for purpose solutions workflows and approaches to constrain present day subsurface stresses and minimize associated uncertainties Building high fidelity geomechanical numerical models provides critical input and understanding for diverse engineering designs and construction as well as geoscience applications Such models greatly contribute towards uncertainty reduction risk management and risk mitigation during the operational life of a given subsurface development and associated infrastructures both on and below the surface This Special Publication contains contributions detailing the latest efforts and perspectives in present day in situ stress characterization prediction and modelling from the borehole to plate tectonic scale There is particular emphasis on the uncertainties that are often associated with data and models **Geology and Natural**
