Preventing Global Warming

The Earth is a dynamic, constantly changing environment in which the hydrosphere, atmosphere, and biosphere all interact. When one changes slightly the change is then felt through out the spheres. Humans need to understand that the change they cause can have a potential for a disastrous affect on the environment. From injecting the atmosphere with [greenhouse gas](#), or deforestation, all the unnatural things done to the environment will have an unnatural affect that will have to be dealt with. We as humans have a moral responsibility to reduce [global warming](#) gasses by changing our modes of transportation, to stop deforestation, and increase government funding into research to inhibit global warming for [show more content](#).

The rest of the world is still living the ways of the past by only producing enough energy for life. While the industrialized world is producing gases that not only hurt their nation's inhabitants, but the rest of the world inhabitants as well. Inhabitants are not just humans, but animals and plants that make up the world. With increasing gas emissions the powerful nations of the world are making a weaker world environment.

Automobiles are a major producer of greenhouse gas. One gallon of fuel burned puts five pounds of [carbon dioxide](#) into the atmosphere. Let's say that an average car gets 25 miles to the gallon, and that car has a ten gallon tank. Every time a car gets filled up with gas, another fifty pounds of carbon dioxide have been put back into the atmosphere, and that is just one car. The automobile industry is very important to the world economy, so I am not saying that we should stop making cars, but there are other solutions. The recent trend of hybrid electric cars that get up to fifty miles to the gallon are becoming more popular. Also public transportation is very important. City dwellers that live downtown, do not need to drive their cars to work. Every major city has a form of public transportation that can get anyone around the city, and for that gallon of gas a bus burns the same five pounds reaches the atmosphere, but instead of one

Preventing Global Warming Essay:

Greenhouse Warming And Nuclear Hazards: A Series Of Essays And Research Papers Peter Fong, 2005-11-24

This book is a rebuttal of the common belief that grave environmental consequences are associated with the issues of global warming and nuclear hazards. Firstly, it is argued that after 25 years of research, no one has actually found evidence for greenhouse warming. Instead, the heat has caused the evaporation of ocean water to increase cloud coverage, reflecting more sunlight away, cooling down the earth and nullifying the effects of greenhouse warming. The author describes this revolution in climatology through new scientific discoveries that solve the longstanding mystery of the ice ages and explain the enigma of the missing greenhouse heat. The solution of the ice age problem is a far more important scientific accomplishment. In the second part of the book, the author argues that the effects of low level radiation can be beneficial rather than damaging. Evidence is presented proving that low level radiation in the US from both natural sources and human activities such as nuclear bombs tests actually reduces death rates from cancer and other diseases and increases longevity. In the Indian State of Kerala, life span has been shown to increase 10.5 years due to the natural radiation from thorium mines. The book proposes that primitive life forms must have developed immune systems to counter the harmful effects of natural radioactivity and that low level radiation from nuclear waste may one day be transformed from trash to treasure. Nature has always been kind to humans. But our self-aggrandizing species has mistaken blessings for disasters and spoiled the otherwise splendid 20th century.

The Routledge Handbook of Environment and Communication

Anders Hansen, Robert Cox, 2015-03-05. This Handbook provides a comprehensive statement and reference point for theory, research, and practice with regard to environment and communication, and it does this from a perspective which is both international and multi-disciplinary in scope. Offering comprehensive critical reviews of the history and state of the art of research into the key dimensions of environmental communication, the chapters of this handbook together demonstrate the strengths of multi-disciplinary and cross-disciplinary approaches to understanding the centrality of communication to how the environment is constructed and indeed contested socially, politically, and culturally. Organised in five thematic sections, *The Routledge Handbook of Environment and Communication* includes contributions from internationally recognised leaders in the field. The first section looks at the history and development of the discipline from a range of theoretical perspectives. Section two considers the sources, communicators, and media professionals involved in producing environmental communication. Section three examines research on news, entertainment, media, and cultural representations of the environment. The fourth section looks at the social and political implications of environmental communication, with the final section discussing likely future trajectories for the field. The first reference handbook to offer a state of the art comprehensive overview of the emerging field of environmental communication research, this authoritative text is a must for scholars of environmental communication across a range of disciplines including environmental studies, media, and

Teaching Science to English Language Learners Joyce Nutta, Nazan U. Bautista, Malcolm B. Butler, 2010-09-13 Teaching Science to English Language Learners offers science teachers and teacher educators a straightforward approach for engaging ELLs learning science

Responding to the Climate Threat Gary Yohe, Henry Jacoby, Richard Richels, Benjamin Santer, 2023-03-13 This book demonstrates how robust and evolving science can be relevant to public discourse about climate policy Fighting climate change is the ultimate societal challenge and the difficulty is not just in the wrenching adjustments required to cut greenhouse emissions and to respond to change already under way A second and equally

important difficulty is ensuring widespread public understanding of the natural and social science. This understanding is essential for an effective risk management strategy at a planetary scale. The scientific, economic, and policy aspects of climate change are already a challenge to communicate without factoring in the distractions and deflections from organized programs of misinformation and denial. Here four scholars, each with decades of research on the climate threat, take on the task of explaining our current understanding of the climate threat and what can be done about it in lay language, importantly without losing critical aspects of the natural and social science. In a series of essays published during the 2020 presidential election, the COVID pandemic, and through the fall of 2021, they explain the essential components of the challenge, countering the forces of distrust of the science and opposition to a vigorous national response. Each of the essays provides an opportunity to learn about a particular aspect of climate science and policy within the complex context of current events. The overall volume is more than the sum of its individual articles. Proceeding each essay is an explanation of the context in which it was written, followed by observation of what has happened since its first publication. In addition to its discussion of topical issues in modern climate science, the book also explores science communication to a broad audience. Its authors are not only scientists; they are also teachers using current events to teach when people are listening. For preserving Earth's planetary life support system, science and teaching are essential. Advancing both is an unending task.

Under the Eagle's Wing Gary Hart, 2008. *Under the Eagle's Wing* provides a sound national security strategy for the new century. Speaking from experience, the former senator was part of the commission that predicted the events of 9/11. Gary Hart makes a compelling plea for the United States and other nations to find strength through a united approach.

Building Bridges to Academic Writing George Eppley, Anita Dixon Eppley, 1997. Written in a clear, supportive style, *Building Bridges to Academic Writing* begins with an accessible overview of the academic disciplines, describes the differences between subjective and objective writing, and offers complete coverage of the writing process. The book then covers personal opinion and academic essays before providing separate chapters on reading and writing about literature, history, psychology, sociology, and science. The final section is a useful mini-handbook.

Power of the People Carol Tomba, 2008. America is as addicted to electricity as it is to oil. Our electricity usage increases every year, yet we still use the same transmission grid that was constructed in the middle of the last century. The grid is stretched to the limit, creating the potential of future blackouts like the one that brought the Northeast to its knees in 2003. Meanwhile, some of our most abundant and affordable generating fuels have become major culprits in global warming. *Power of the People* explores, in a nontechnical, conversational way, some of the clean, green 21st-century technologies that are available and how and why we should plug them into our national grid. This important essay explores our failure as a country to adopt these no-regrets technologies and policies as swiftly as the rest of the world and why it matters for the future of every American.
