

## PREDICTIVE MAINTENANCE

Carried out in order to protect assets from unexpected breakdowns

This maintenance is carried out when needed, that is, whenever a probable breakdown is discovered. This does not happen on a frequent basis

It is more demanding and complex than preventive maintenance

This maintenance operation is less expensive than preventive maintenance since it simply avoids unnecessary maintenance, lowering maintenance expenses

It takes less time because this sort of maintenance just requires inspection and maintenance as needed

## PREVENTATIVE MAINTENANCE

Carried out in order to forecast potential faults so that they can be avoided

This maintenance is carried out whether it is required or not, i.e. whether a possible problem has been discovered or not. This happens on a regular basis.

It is a less difficult and straightforward technique than predictive maintenance

This maintenance procedure is more expensive than predictive maintenance since regular maintenance necessitates a larger expenditure

It takes more time because inspection and maintenance must be performed on a regular basis with this sort of maintenance
