Formal Approaches to Software Testing Jens Grabowski, Brian Nielsen, 2005-03-07 Testing often accounts for more than 50% of the required effort during system development. The challenge for research is to reduce these costs by providing new methods for the specification and generation of high quality tests. Experience has shown that the use of formal methods in testing represents a very important means for improving the testing process. Formal methods allow for the analysis and interpretation of models in a rigorous and precise mathematical manner. The use of formal methods is not restricted to system models only. Test models may also be examined. Analyzing system models provides the possibility of generating complete test suites in a systematic and possibly automated manner, whereas examining test models allows for the detection of design errors in test suites and their optimization with respect to readability or compilation and execution time. Due to the numerous possibilities for their application, formal methods have become more and more popular in recent years. The Formal Approaches in Software Testing FATES workshop series also benefits from the growing popularity of formal methods. After the workshops in Aalborg, Denmark 2001, Brno, Czech Republic 2002, and Montreal, Canada 2003, FATES 2004 in Linz, Austria, was the fourth workshop of this series. Similar to the workshop in 2003, FATES 2004 was organized in a liaison with the IEEE ACM Conference on Automated Software Engineering ASE 2004. FATES 2004 received 41 submissions. Each submission was reviewed by at least three independent reviewers from the Program Committee, with the help of some additional reviewers. Based on their evaluations, 14 full papers and one work-in-progress paper from 11 different countries were selected for presentation.

Conceptual Structures: Fulfilling Peirce's Dream Dickson Lukose,1997-07-16 This book constitutes the refereed proceedings of the Fifth International Conference on Conceptual Structures ICCS 97 held in Seattle Washington USA in August 1997 The 39 full papers presented were carefully selected and revised for inclusion in the volume Also included are 9 abstracts of conceptual graphs tools The papers are organized in sections on knowledge representation knowledge modeling formal concept analysis formal reasoning applications of conceptual graphs and conceptual graphs tools This book competently documents the progress achieved in the area since the predecessor conference ICCS 96 the proceedings of which have been published as LNAI 1115 **Europa** Giuseppe Casale,2002 **Beyond open access: visions for open evaluation of scientific papers by post-publication peer review** Nikolaus Kriegeskorte,Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2 4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper s quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As

the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system about these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point

The End of Finance Jan Toporowski, 2002-03-11 This volume develops an original critique of the belief that the present era of finance where finance markets dominate contemporary capitalist economies represents the best possible way of organising economic affairs In fact it is argued the ensuing economic instability and inefficiency create the preconditions for the end of the dominance of finance The End of Finance develops a theory of capital market inflation rooted in the work of Veblen Kalecki Keynes and Minsky demonstrating how it disinclines productive activity on the part of firms provides only short term conditions that are propitious for privatisation and distorts monetary policy in the long term The author examines the role of pension fund schemes and financial derivatives in transmitting capital market inflation and provides a nuanced analysis of the contradictory role they play in the financial system Capital market inflation is also examined in its historical context and compared with past inflations in particular the South Sea and Mississippi Bubbles which spawned the first financial derivatives and the first privatisations This broad historical vision allows us to see these forms of inflation as temporary and provisional in character
