Differential Object Marking in Romance Monica Alexandrina Irimia,Alexandru Mardale,2023-12-15 Differential marking as applied to direct objects has long been discussed as one of the characterizing traits of many Romance languages There is however wide consensus that a detailed investigation into the nature of this phenomenon raises numerous challenges both at the empirical and theoretical level Many questions are still being raised regarding which precise morpho syntactic strategies count as differential object marking whether the data can be unified and subsequently how they are to be unified formally and theoretically Additionally a thorough investigation of this phenomenon is still needed for many Romance languages and especially at the micro variation level This volume brings together original papers addressing various aspects

of differential object marking in Romance languages focusing on micro variation from both a descriptive and formal perspective touching on diachrony language contact synchrony and using a large set of methodologies Entrepreneurial Ecosystems Allan O'Connor,Erik Stam,Fiona Sussan,David B. Audretsch,2017-12-30 This book features latest research insights into the study of the entrepreneurial ecosystem The focus is on understanding its influence on the development of socially and physically defined places and how these factors are related with each other The book argues that regardless of how the concept of a place is defined be it cities regions nations or otherwise the impact of new technologies will influence much of our business social and economic landscapes Evidently there is an increasing pressure on places to embrace new opportunities for strategic development and confront complacency The solution may very well be in creating and sustaining entrepreneurial ecosystems where entrepreneurial action thrives and innovation drives the new economy A Critical Examination of Language and Community Paul Chamness Miller,Brian G. What Is the Role of Learning and Multisensory Interactions?** Guillaume Andéol, Brian D. Simpson, Ewan A. Macpherson, 2016-08-29 Spatial hearing ability has been found to vary widely across listeners A survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e g acoustical characteristics related to sound localization cues perceptual factors e g sensory cognitive processing perceptual learning multisensory interactions and methodological factors e g differences in stimulus presentation methods across studies However the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals with normal hearing or within special populations e g hearing impaired listeners remains largely unknown Likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research A better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have numerous benefits In particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational aids for the visually impaired For this Research Topic we have considered manuscripts that present new methods or review existing methods for the study of inter individual differences present new data or review existing data concerning acoustical features relevant for explaining inter individual differences in sound localization performance present new or review existing psychophysical or neurophysiological findings concerning spatial hearing and or auditory perceptual learning and or multisensory interactions in humans normal or impaired young or older listeners or other species discuss the influence of inter individual differences on the design and use of assistive listening devices rehabilitation or human machine interfaces involving spatial hearing or

Learning a non-native language in a naturalistic environment: Insights from behavioural and neuroimaging research Christos

Pliatsikas, Vicky Chondrogianni, 2015-09-02 It is largely accepted in the relevant literature that successful learning of one or more non native languages is affected by a number of factors that are independent of the target language s per se these factors include the age of acquisition AoA of the target language s the type and amount of formal instruction the learners have received as well as the amount of language use that the learners demonstrate Recent experimental evidence suggests that one crucial factor for efficient native like performance in the non native language is the amount of naturalistic exposure or immersion that the learners receive to that language This can be broadly defined as the degree to which language learners use their non native language outside the classroom and for their day to day activities and usually presupposes that the learners live in an environment where their non native language is exclusively or mostly used Existing literature has suggested that linguistic immersion can be beneficial for lexical and semantic acquisition in a non native language as well as for non native morphological and syntactic processing More recent evidence has also suggested that naturalistic learning of a non native language can also have an impact on the patterns of brain activity underlying language processing as well as on the structure of brain regions that are involved expressed as changes in the grey matter structure This Research Topic brings together studies on the effects of learning and speaking a non native language in a naturalistic environment These include more efficient or native like processing in behavioural tasks tapping on language lexicon morphology syntax as well as changes in the brain structure and function as revealed by neuroimaging studies
