Patricia A. Ganz, 2007-07-28 Cancer survivors have increased in number more than threefold over the last 30 years to the current level of 10 million and growing. Among patients diagnosed today nearly two thirds are expected to survive 5 or more years. This success may be attributed to the expertise of physicians and nurses from multiple disciplines who precisely execute a complex plan based in clinical research. Yet after a period of orchestrated and frequent interaction with healthcare professionals bolstered by the attention and encouragement of family and friends the cancer patient may view the end of treatment with anxiety and concern. And what exactly is the plan? Just as healthcare providers are expected to keep up to date with the latest in treatment and prevention they must now coordinate and provide comprehensive survivor care. This significant text organized and edited by Patricia A. Ganz and involving the contributions of over 40 distinguished authors provides a greatly needed resource for survivor care today and tomorrow. The current attention on cancer survivorship represents a convergence of burgeoning survivor numbers, a corpus of data on late treatment effects in children and adults, and increased public and professional awareness. Dr. Ganz and many of the contributors to this comprehensive text pioneered cancer survivorship and they must justifiably be proud that their advocacy and commitment to survivor care and research have resulted in in-depth reports by the President's Cancer Panel, several Institute of Medicine studies, and this timely text. **The Condor**, 1986

Psychiatric Diagnosis Ihsan M. Salloum, Juan E. Mezzich, 2009-03-23 Psychiatric diagnosis is one of the most important topics within the broad field of psychiatry. Clear, accurate definitions of the various disorders are essential for clinicians around the world to be confident that they are classifying patients in the same way, thereby enabling comparisons of treatment regimens and their outcomes. There are two major classification systems in use: one produced by the World Health Organization, the WHO International Classification of Diseases, Mental Disorders, Chapter, and one by the American Psychiatric Association, the well-known Diagnostic and Statistical Manual of Mental Disorders. Both of these are being revised, so this book from the prestigious World Psychiatric Association is especially timely. In this book, leading experts in the field provide a broad and integrated coverage of the concepts, structure, and context of psychiatric diagnosis. It begins by addressing mental health and illness around the world from historical, philosophical, and cultural perspectives. Health is approached comprehensively to include such aspects as resilience, resources, and quality of life. The book then covers major specific psychopathology topics in Section II, including new categorizations and dimensional approaches. Section III concentrates on the complex problem of comorbidity, a primary challenge for modern diagnostic classifications in psychiatry. Finally, Section IV reviews emerging international diagnostic systems in psychiatry, considering innovative models and adaptations. This book will be essential reading for anyone involved in the diagnosis of psychiatric disorders. *Depression in Parents, Parenting, and Children*, Institute of Medicine, National Research Council, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Depression, Parenting Practices, and the Healthy Development of Children, 2009-09-28 Depression is a widespread condition affecting approximately 7.5 million parents in the

U S each year and may be putting at least 15 million children at risk for adverse health outcomes Based on evidentiary studies major depression in either parent can interfere with parenting quality and increase the risk of children developing mental behavioral and social problems Depression in Parents Parenting and Children highlights disparities in the prevalence identification treatment and prevention of parental depression among different sociodemographic populations It also outlines strategies for effective intervention and identifies the need for a more interdisciplinary approach that takes biological psychological behavioral interpersonal and social contexts into consideration A major challenge to the effective management of parental depression is developing a treatment and prevention strategy that can be introduced within a two generation framework conducive for parents and their children Thus far both the federal and state response to the problem has been fragmented poorly funded and lacking proper oversight This study examines options for widespread implementation of best practices as well as strategies that can be effective in diverse service settings for diverse populations of children and their families The delivery of adequate screening and successful detection and treatment of a depressive illness and prevention of its effects on parenting and the health of children is a formidable challenge to modern health care systems This study offers seven solid recommendations designed to increase awareness about and remove barriers to care for both the depressed adult and prevention of effects in the child The report will be of particular interest to federal health officers mental and behavioral health providers in diverse parts of health care delivery systems health policy staff state legislators and the general public
