

REMOVAL OF COIL AND COIL CORE

With the magneto cover off remove the two filler head screws, M-126XB, holding the coil core clamps, 2503, in place. Under one of the coil core clamps is found the ground end of the primary and secondary of the coil. Turn the rotor until the magnetism no longer grips the coil core to the main housing. Pull the coil and coil core free. When replacing the coil and coil core on the magneto be sure the ground surface of the core is against the laminated cores of the housing.

When the coil is in place the coil terminal should be up and toward the breaker point. The surface of this contact must be clean. Be sure to place the ground lead of the coil under the core screw lock washer, not under the core coil clamp.

REMOVAL OF COIL FROM CORE

The coil, X2766, is held to the coil core, X2706, by two wedges, 22548. It is therefore necessary to press against the coil core with considerable force to remove it from the coil. Be careful when removing the core from the coil that the coil is supported in such a way that there is no danger of the primary of the coil being pushed out of the secondary.

When replacing a coil on the coil core, slide it on, being sure that the finished side of the core is down and the high-tension button on the coil is up. Then, on the finished side of the core, press in the two wedges, one on each side, until they are flush with the primary coil winding. Slide the coil shield, 1760, on, one on each side, and thread the primary lead through the slot provided in the coil shield.

STOP DEVICES

There are three different types of stop devices for the model C Wico magneto, all of which serve the same fundamental purpose, that of rendering the magneto inoperative by short-circuiting the primary circuit and thus stopping the engine. The illustration at right shows these four different types of stop devices and distinctly illustrates the manner in which they are assembled to the housing. In all cases the two small fibre washers,

M-34X, are inserted into the hole in the side of the main housing. All of the parts below the two M-34X washers are assembled on the inside of the magneto. All parts above the two M-34X washers are assembled from the outside of the magneto. Each of these stop devices is available as a replacement kit. Each kit contains all of the parts necessary for completely replacing the stop device of that type.

The first type of stop device shown is the stop-button. To operate the stop button it is merely necessary to press upon the red stop button, A-138XA, and hold it in until the engine stops, merely a matter of seconds. When the stop button is released the circuit is again opened and the engine is ready to start. The complete replacement kit for the standard stop-button is available under the part number X4756.

The standard ground stud is the second assembly shown. It is used when it is desired to remotely control the magneto, i.e., by attaching a wire to the ground stud and leading it to a control switch, the other side of which is grounded, the magneto may be remotely controlled from any distance.

The third assembly shown is the Wisconsin type stop button. The black nut, 19928, is rotated to the left on the left-hand threaded stud, 4631, which pushes grounding sleeve 16-358 into contact with the housing, thus short-circuiting the primary. The magneto remains inoperative until the stop nut is rotated to the right, thus opening the circuit.

The Wisconsin type stop-button is of distinct advantage on equipment such as rail cars where the engine is geared directly to the wheels as the regular stop-button would not provide positive stopping for as soon as the stop-button was released the engine would again start from the momentum of the car. This is not true with the Wisconsin type stop-button. On equipment which does not have to meet the above requirements, it is perfectly satisfactory to replace the Wisconsin type stop-button with the regular Wico stop-button.

The fourth assembly serves the same purpose as the regular ground stud or ground connection, as it is called. Though there is a great deal of difference in the assembly of the two, the only functional difference is that this connection occupies considerably less space than the standard ground connection. It was developed for and is used on LeRoi engines using Wico magnetos of the following specifications: C-623C, C-992, C-1145, C1390. It is available as a replacement kit under the number X4758.

All model C replacement housings are supplied with ground studs, both right and left sides. There may be converted into either standard stop-button or standard
