

Question 1:

Consider a block of mass m attached to a spring with force constant k , as shown in the figure. The spring can be either stretched or compressed. The block slides on a frictionless horizontal surface, as shown. When the spring is relaxed, the block is located at $x = 0$. If the block is pulled to the right a distance A and then released, A will be the amplitude of the resulting oscillations. Assume that the mechanical energy of the block-spring system remains unchanged in the subsequent motion of the block.

- a) After the block is released from $x = A$, it will:
- remain at rest.
 - move to the left until it reaches equilibrium and stop there.
 - move to the left until it reaches $x = -A$ and stop there.
 - move to the left until it reaches $x = -A$ and then begin to move to the right.

The time it takes the block to complete one cycle is called the period. Usually, the period is denoted T and is measured in seconds.

The frequency, denoted f , is the number of cycles that are completed per unit of time: $f = 1/T$. In SI units, f is measured in inverse seconds, or hertz (Hz).

- b) If the period is doubled, the frequency is:

- unchanged.
- doubled.
- halved.

- c) An oscillating object takes 0.10 s to complete one cycle; that is, its period is 0.10 s. What is its frequency f ?
- d) If the frequency is 40 Hz, what is the period T ?

The following questions refer to the second figure below that graphically depicts the oscillations of the block on the spring. Note that the vertical axis represents the x coordinate of the oscillating object, and the horizontal axis represents time.

- e) Which points on the x axis are located a distance A from the equilibrium position?
- R only.
 - Q only.
 - both R and Q.
- f) Suppose that the period is T . Which of the following points on the t axis are separated by the time interval T ?
- K and L.
 - K and M.
 - K and P.
 - L and N.
 - M and P.

Now assume for the remaining Parts g) – j), that the x coordinate of point R is 0.12 m and the t coordinate of point K is 0.0050 s.

- g) What is the period T ?

Hint: In moving from the point $t = 0$ to the point K, what fraction of a full wavelength is covered? Call that fraction a . Then you can set $aT = 0.0050$ s. Dividing by the fraction a will give the period T .

- h) How much time t does the block take to travel from the point of maximum displacement to the opposite point of maximum displacement?
- i) What distance d does the object cover during one period of oscillation?
- j) What distance d does the object cover between the moments labeled K and N on the graph?

Question 2:

Consider a harmonic oscillator at four different moments, labeled A, B, C, and D, as shown in the figure below. Assume that the force constant k , the mass of the block, m , and the amplitude of vibrations, A , are given. Answer the following questions.

- a) Which moment corresponds to the maximum potential energy of the system?
- b) Which moment corresponds to the minimum kinetic energy of the system?
