The Family Business W R Maxwell, 2024-11-15 It is a Family Business unlike any other American women and Dallas women in particular have a reputation for being beautiful and sexy Nice figures good hair and great skin For the last 20 years Lamar and Travis two trust fund brothers have been cashing in on this reputation and selling female sex slaves on the dark web providing well trained slaves to wealthy men from Marrakesh to Timbuktu Men looking for just the right woman to satisfy their particular sexual kink A few at a time now and then of course but the total has grown to over 100 women The authorities can do little to prevent the abductions and since there is no body or ransom demand there is very little evidence of a crime In the words of the Dallas PD people disappear all the time without leaving a forwarding address This unique family enterprise requires women be scrupulously trained and for that Lamar and Travis have the perfect training facility in a posh old money neighborhood and three floors below ground Included in the elaborate set up is a fully equipped dungeon with seven training stations and every sex toy tool apparatus and device imaginable to prepare these females for the life that awaits them

Cornelius Tacitus,1970 *Artificial Neural Nets and Genetic Algorithms* Rudolf F. Albrecht,Colin R. Reeves,Nigel C. Steele,2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are the subjects of contributions to this volume There are contributions reporting theoretical developments in the design of neural networks and in the management of their learning In a number of contributions applications to speech recognition tasks control of industrial processes as well as to credit scoring and so on are reflected Regarding genetic algorithms several methodological papers consider how genetic algorithms can be improved using an experimental approach as well as by hybridizing with other useful techniques such as tabu search The closely related area of classifier systems also receives a significant amount of coverage aiming at better ways for their implementation Further while there are many contributions which explore ways in which

genetic algorithms can be applied to real problems nearly all involve some understanding of the context in order to apply the genetic algorithm paradigm more successfully That this can indeed be done is evidenced by the range of applications covered in this volume
