Privileged Access Management for Secure Storage Administration: IBM Spectrum Scale with IBM Security Verify Privilege Vault Vincent Hsu,Sridhar Muppidi,Sandeep R. Patil,Kanad Jadhav,Sumit Kumar,Nishant Singhai,IBM Redbooks,2021-01-08 There is a growing insider security risk to organizations Human error privilege misuse and cyberespionage are considered the top insider threats One of the most dangerous internal security threats is the privileged user with access to critical data which is the crown jewels of the organization This data is on storage so storage administration has critical privilege access that can cause major security

breaches and jeopardize the safety of sensitive assets Organizations must maintain tight control over whom they grant privileged identity status to for storage administration Extra storage administration access must be shared with support and services teams when required There also is a need to audit critical resource access that is required by compliance to standards and regulations IBM Security™ Verify Privilege Vault On Premises Verify Privilege Vault formerly known as IBM Security™ Secret Server is the next generation privileged account management that integrates with IBM Storage to ensure that access to IBM Storage administration sessions is secure and monitored in real time with required recording for audit and compliance Privilege access to storage administration sessions is centrally managed and each session can be timebound with remote monitoring You also can use remote termination and an approval workflow for the session In this IBM Redpaper we demonstrate the integration of IBM Spectrum Scale and IBM Elastic Storage Server IBM ESS with Verify Privilege Vault and show how to use privileged access management PAM for secure storage administration This paper is targeted at storage and security administrators storage and security architects and chief information security officers

Through the use of virtualization and disk cache the TS7700 family operates at disk speeds while maintaining compatibility with existing tape operations. Its fully integrated tiered storage hierarchy takes advantage of both disk and tape technologies to deliver performance for active data and best economics for inactive and archive data. This IBM Redbooks publication describes the TS7700 R3.3 architecture, planning, migration, implementation, and operations. The latest TS7700 family of z Systems tape virtualization is offered as two models. IBM TS7720 features encryption-capable high capacity cache that uses 3 TB SAS disk drives with RAID 6 which can scale to large capacities with the highest level of data protection. IBM TS7740 features encryption-capable 600 GB SAS drives with RAID 6 protection. Both models write data by policy to physical tape through attachment to high capacity high performance IBM TS1150 and earlier IBM 3592 model tape drives that are installed in IBM TS3500 tape libraries. Physical tape support is optional on TS7720. TS7700 R3.3 also supports external key management for disk-based encryption by using IBM Security Key Lifecycle Manager. This book is intended for system architects who want to integrate their storage systems for smoother operation.
