

11.6 Turn the bulb holder counterclockwise until it stops, then pull it out of the taillight housing

4 Push the bulb in and turn it counterclockwise to remove it. Check the socket terminals for corrosion and clean them if necessary. Line up the pins on the new bulb with the slots in the socket, push in and turn the bulb clockwise until it locks in place. **Note:** The pins on the bulb are offset so it can only be installed one way. It is a good idea to use a paper towel or dry cloth when handling the new bulb to prevent injury if the bulb should break and to increase bulb life.

5 Position the lens on the reflector and install the screws. Be careful not to overtighten them.

6 Place the lens/reflector assembly into the housing and install the screw, tightening it securely.

Taillight bulbs

7 To remove the taillight bulbs, remove the tail section and the passenger seat (see Chapter 6).

8 Turn the bulb holders counterclockwise (see illustration) until they stop, then pull straight out to remove them from the taillight housing. The bulbs can be removed from the holders by turning them counterclockwise and pulling straight out.

9 Check the socket terminals for corrosion and clean them if necessary. Line up the pins on the new bulb with the slots in the socket, push in and turn the bulb clockwise until it locks in place. **Note:** The pins on the bulb are offset so it can only be installed one way. It is

a good idea to use a paper towel or dry cloth when handling the new bulb to prevent injury if the bulb should break and to increase bulb life.

10 Make sure the rubber gaskets are in place and in good condition, then line up the tabs on the holder with the slots in the housing and push the holder into the mounting hole. Turn it clockwise until it stops to lock it in place. **Note:** The tabs and slots are two different sizes so the holders can only be installed one way.

11 Reinstall the seat and the tail section.

12 Turn signal assemblies - removal and installation

1 The turn signal assemblies can be removed individually in the event of damage or failure.

2 To remove a turn signal assembly, first follow the wiring harness from the turn signal to its electrical connectors. Mark the wires with pieces of numbered tape then unplug the electrical connectors.

3 Unscrew the nut that secures the turn signal to the fairing or rear fender (see illustrations). If you're removing a rear turn signal, don't lose the spring plate.

4 Detach the turn signal from the fairing or fender. If you're installing a new turn signal, separate the stalk (pin) from the old stalk and transfer it to the new one.

5 Installation is the reverse of the removal procedure.

13 Turn signal circuit - check

1 The battery provides power for operation of the signal lights, so if they do not operate, always check the battery voltage and specific gravity first. Low battery voltage indicates either a faulty battery, low electrolyte level or a defective charging system. Refer to Chapter 1 for battery checks and Sections 29 and 30 for

charging system tests. Also, check the fuses (see Section 5).

2 Most turn signal problems are the result of a burned out bulb or corroded socket. This is especially true when the turn signals function properly in one direction, but fail to flash in the other direction. Check the bulbs and the sockets (see Section 11).

3 If the bulbs and sockets check out okay, check for power at the brown wire to the turn signal flasher (see illustration) with the Ignition On. If there's no power at the brown wire, check the junction box (see Section 6).

4 If the junction box is okay, check the wiring between the turn signal flasher and the turn signal lights (see the wiring diagrams at the end of this Chapter).

5 If the wiring checks out okay, replace the turn signal flasher.

14 Brake light switches - check and replacement

Circuit check

1 Before checking any electrical circuit, check the fuses (see Section 5).

2 Using a test light connected to a good ground, check for voltage to the brown wire at the brake light switch. If there's no voltage present, check the brown wire between the switch and the junction box (see the wiring diagrams at the end of this Chapter).

3 If voltage is available, touch the probe of the test light to the other terminal of the switch, then pull the brake lever or depress the brake pedal - if the test light doesn't light up, replace the switch.

4 If the test light does light, check the wiring between the switch and the brake lights (see the wiring diagrams at the end of this Chapter).
