Applicative Morphology Sara Pacchiarotti, Fernando Zuniga, 2022-10-03 This book is about recurrent functions of applicative morphology not included in typologically oriented definitions Based on substantial cross linguistic evidence it challenges received wisdom on applicatives in several ways First in many of the surveyed languages applicatives are the sole means to introduce a non Actor semantic role into a clause When there is an alternative way of expression the applicative counterpart often has no valence increasing effect on the targeted root Second applicative morphology can introduce constituents which are not syntactic objects and or co occur with obliques Third functions such as conveying aspectual nuances to the predicate intensity repetition habituality or its arguments partitive P highly individuated P narrow focusing constituents and functioning as category changing devices are attested in geographically distant and genetically unrelated languages Further this volume reveals that spatial related morphology is prone to developing applicative functions in disparate languages and phyla Finally several contributions discuss the diachrony of applicative constructions and their non syntactic attested functions including a case of applicatives in the making

Bibliokrafi ya Sesotho sa Leboa go fihla ka 1993 ,1994 *Morphosyntactic variation in East African Bantu languages* Hannah Gibson, Rozenn Guérois, Gastor Mapunda, Lutz Marten, 2024-02-19 The approximately 500 Bantu languages spoken across vast areas of Central Eastern and Southern Africa are united by the presence of a number of broad typological similarities including for example complex noun class system and agglutinative verbal morphology However the languages also exhibit a

high degree of micro variation Recent work has demonstrated fine grained morphosyntactic variation across many Bantu languages focusing on grammatical topics such as double object constructions inversion constructions or object marking adopting formal comparative and typological perspectives Continuing in this vein this volume builds on the momentum of the dynamic field of morphosyntactic variation in Bantu and contributes to the growing body of work which examines morphosyntactic variation with a regional focus on the Bantu languages of East Africa The East African region is characterized by high linguistic complexity in terms of the number of languages spoken in terms of the four different linguistic phyla present and in terms of the inherent sociolinguistic dynamics The current volume explores this complexity further by bringing together studies which investigate features of morphosyntax of an individual language as well as those which develop an in depth examination of a single morphosyntactic phenomena in a small sample of languages The book seeks also to add to the descriptive status of the languages under examination as well as raising questions relating to language language contact language change and micro variation in related languages spoken in close geographic proximity

as a discussion of practical semantic fieldwork techniques The methodological protocols tested and employed by the authors on underdescribed languages spanning seven different language families are intended to be applicable as cross linguistic tools while also indicating the successes and challenges of their contributions Expanding the study of modality to a wider set of underdescribed languages will undoubtedly bring new insights into our theoretical understanding of modality and deepen our understanding of a cross linguistic typology of modal expressions
