**Troubled Waters** Patrick Troy, 2008-06-01 Australian cities have traditionally relied for their water on a predict and provide philosophy that gives primacy to big engineering solutions. In more recent years, privatised water authorities seeking to maximise consumption and profits have reinforced the emphasis on increasing supply. Now the cities must cope with the stresses these policies have imposed on the eco systems from which they harvest water into which they discharge wastes and on which they are located. Residents are having to pay more for their water while the cities themselves are becoming less sustainable. Must we build more dams and desalination plants or should we be managing the demand for urban water more prudently? This book explores the demand for urban water and how it has changed in response to shifting social mores over the past century. It explains how demand for centralised provision of water might be reshaped to enable the cities to better cope with expected changes in supply as our climate changes. And it discusses the implications of property rights in water for proposals to privatise water services.

**Dry Run** Jerry Yudelson, 2010-06-01 When the rivers run dry, water solutions for a thirsty planet. In the Age of Scarcity now upon us, fresh water shortages are an increasingly serious global problem. With water restrictions emerging in many developed countries and water diversions for industrial, urban and environmental reasons stirring up oceans of controversy, there is a growing thirst for innovative approaches to reducing our water footprint. *Dry Run* shows the best ways to manage scarce water resources and handle upcoming urban water crises. Featuring original interviews with more than twenty-five water researchers and industry experts, this book explains water issues and proposes solutions for homes, buildings, facilities and schools. Examining the vital linkages between water, energy, use, urban development and climate change, *Dry Run* demonstrates best practices for achieving net zero water use in the built environment, including water conservation strategies for buildings, factories, cities and rainwater harvesting, graywater reuse and water reclamation systems, water efficiency retrofits, on-site sewage treatment, new water reuse and supply technologies. Ideal for concerned citizens, building managers, homeowners, architects, engineers, developers and public officials faced with charting a course in a more arid future, *Dry Run* overflows with practical solutions. Jerry Yudelson, PE, LEED AP, leads the Yudelson Associates consultancy and is a leading authority on green building, clean water and sustainable development. He is the author of eleven books, including *Choosing Green* and *Green Building A to Z*.
