Shook, 2005-01-01 The Dictionary of Modern American Philosophers includes both academic and non academic philosophers

and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in

the development of psychology pedagogy sociology anthropology education theology political science and several other fields

before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a

short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and

suggestions for further reading While all the major post Civil War philosophers are present the most valuable feature of this

dictionary is its coverage of a huge range of less well known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought **Symbolic Logic** Copi, **Symbolic Logic** Dale Jacquette, 2001 This comprehensive intro text covers central topics of elementary and symbolic logic It contains many problems and exercises and provides a solid foundation for continued study of advanced topics in logic *The De-mathematisation of Logic* Barry Hartley Slater, 2007 *Informal Logic* Wayne Grennan, 1997 Grennan bases his evaluation of arguments on two criteria logical adequacy and pragmatic adequacy He asserts that the common formal logic systems while logically sound are not very useful for evaluating everyday inferences which are almost all deductively invalid as stated Turning to informal logic he points out that while more recent informal logic and critical thinking texts are superior in that their authors recognize the need to evaluate everyday arguments inductively they typically cover only inductive fallacies ignoring the inductively sound patterns frequently used in successful persuasion To redress these problems Grennan introduces a variety of additional inductive patterns Concluding that informal logic texts do not encourage precision in evaluating arguments Grennan proposes a new argument evaluation procedure that expresses judgments of inferential strength in terms of probabilities Based on theories of Stephen Toulmin Roderick Chisholm and John Pollock his proposed system allows for a more precise judgment of the persuasive force of arguments

Langford, 1974 Includes lists of members **Systems of Formal Logic** L.H. Hackstaff, 2012-12-06 The present work constitutes an effort to approach the subject of symbolic logic at the elementary to intermediate level in a novel way The book is a study of a number of systems their methods their relations their differences In pursuit of this goal a chapter explaining basic concepts of modern logic together with the truth table techniques of definition and proof is first set out In Chapter 2 a kind of *ur* Logic is built up and deductions are made on the basis of its axioms and rules This axiom system resembling a propositional system of Hilbert and Bernays is called P since it is a positive logic i.e. a logic devoid of negation

This system serves as a basis upon which a variety of further systems are constructed including among others a full classical propositional calculus an intuitionistic system a minimum propositional calculus a system equivalent to that of F B Fitch Chapters 3 and 6 These are developed as axiomatic systems By means of adding independent axioms to the basic system P the notions of independence both for primitive functors and for axiom sets are discussed the axiom sets for a number of such systems e g Frege's propositional calculus being shown to be non independent Equivalence and non equivalence of systems are discussed in the same context The deduction theorem is proved in Chapter 3 for all the axiomatic propositional calculi in the book *Introduction to Symbolic Logic* John L. Pollock, 1969 *Handbook of Philosophical Logic* Dov M. Gabbay, Franz Guenther, 2001-06-30 It is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook It has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then The first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas The main logic article in the Encyclopaedia Britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic We are confident that the second edition will prove to be just as good The first edition was the second handbook published for the logic community It followed the North Holland one volume Handbook of Mathematical Logic published in 1977 edited by the late Jon Barwise The four volume Handbook of Philosophical Logic published 1983 1989 came at a fortunate temporal junction at the evolution of logic This was the time when logic was gaining ground in computer science and artificial intelligence circles These areas were under increasing commercial pressure to provide devices which help and or replace the human in his daily activity This pressure required the use of logic in the modelling of human activity and organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

**Philosophy** R. H. Popkin, Richard Henry Popkin, Avrum Stroll, 1993 In this third edition the chapter on ethics has been expanded and updated to include material on euthanasia abortion and censorship The impact of the break up of the former communist countries is discussed in the chapter on political philosophy The book contains new material on artificial intelligence logic and contemporary philosophy **Future Logic** Avi Sion, 1990-08-02 Future Logic is an original and wide ranging treatise of formal logic It deals with deduction and induction of categorical and conditional propositions involving the natural temporal extensional and logical modalities This is the first work ever to strictly formalize the inductive processes of generalization and particularization through the novel methods of factorial analysis factor selection and formula revision This is the first work ever to develop a formal logic of the natural temporal and extensional types of conditioning as distinct from logical conditioning including their production from modal categorical premises **Nominalistic Systems** Rolf A. Eberle, 2012-12-06 1 1 PROGRAM It will be our aim to reconstruct with precision certain views which have been traditionally associated with nominalism and to investigate problems arising from these views in the construction of interpreted formal

systems Several such systems are developed in accordance with the demand that the sentences of a system which is acceptable to a nominalist must not imply the existence of any entities other than individuals Emphasis will be placed on the constructionist method of philosophical analysis To follow this method is to introduce the central notions of the subject matter to be investigated into a system governed by exact rules For example the constructionist method of investigating the properties of geometric figures may consist in formulating a system of postulates and definitions which together with the apparatus of formal logic generates all necessary truths concerning geometric figures Similarly a constructionist analysis of the notion of an individual may take the form of an axiomatic theory whose provable assertions are just those which seem essential to the role played by the concept of an individual in systematic contexts Such axiomatic theories gain in interest if they are supplemented by precise semantical rules specifying the denotation of all terms and the truth conditions of all sentences of the theory
