

O Level Human and Social Biology (5096)

How many lessons per week will I need to cover the syllabus?

This partly depends on what your students have done before they begin their O Level course. If they have been in your Centre for some years beforehand, then you may have been able to begin building up their knowledge and skills already. If they come to you from many different backgrounds, then you may need to do more work with them to prepare them for O Level. As a rough guideline, many Centres teach their O Level Human and Social Biology students for about 2 hours 30 minutes per week over a 2-year period, but it is not unusual for the time allocated to be significantly more or less than this. You should try to have one relatively long session each week, so that your students can carry out practical work.

There is no Practical paper, so my students don't need any laboratory experience, do they?

Yes, they do need to have some laboratory experience. The theory paper contains questions that are about practical work and set in practical contexts. The syllabus makes it clear, in the Aims, in both Assessment Objectives A and B, in the Scheme of Assessment and in the Subject Content, that the course should have a practical component and that candidates should have some experience of doing (as well as seeing) experimental work. The questions in the theory paper will assess practical skills, including both data handling and familiarity with standard laboratory equipment. Any candidates without experience of doing practical work will be disadvantaged in this paper.

The Subject Content listing in the syllabus identifies suggestions for practical work with an *. Using practical work as a teaching tool gives students the opportunity to learn by hands-on doing. Practical work is thus an excellent way of enabling candidates to build an understanding of specific theoretical perspectives of Human and Social Biology. A Human and Social Biology qualification without any practical component at all would be a second-rate assessment of the subject, and CIE aims to provide valid qualifications acceptable in all areas of the world.

What equipment should we have in our laboratories?

Much useful information is given in Cambridge International Examination's booklet *Planning for Practical Science in Secondary Schools*, (New Edition June 2002) available free from our publications department. In order to fulfil the practical suggestions in the O Level Human and Social Biology syllabus the following equipment and materials could be used:

- Access to a microscope sufficient to see plant and animal cells (1h)
- Visking (dialysis) tubing) (onion epidermis (needs a microscope) or citrus fruit cells are suggested as alternatives) (1j)
- Benedict's reagent, iodine in potassium iodide solution (often termed iodine solution), biuret reagent (or 1 mol dm^{-3} sodium hydroxide solution and 0.5 mol dm^{-3} copper sulphate solution), absorbent paper suitable for the grease spot test (3a)
- Disclosing tablets to show bacteria on teeth (diluted food colouring may work if these are not available) (4c)
- Amylase enzyme (diastase will work well and is cheap), starch suspension (made fresh by boiling starch in water and filtering to remove starch grains), iodine solution (see above), source of heat (e.g. bunsen burner or gas ring or hot plate), 1 mol dm^{-3} sodium hydroxide solution and 1 mol dm^{-3} hydrochloric acid solution (to be added 1 drop at a time to change pH), universal indicator paper or liquid with colour chart to measure pH (4e)
- Lime water or bicarbonate indicator (6f)
- Large bowl of water, smaller bowl and plastic tube (6g)
- Filter pump to connect to tap, to draw on lit cigarette, cotton wool to absorb tar, universal indicator paper or liquid to measure pH (6g)
- Human skeleton or model of skeleton; human, animal or model joint (articulated skeleton hanging from a hook is best, but a bag of bones is useful) (7g)
- Sharp knife to cut up kidney (8b) cow, sheep or goat eye (9c)
- Piece of board with pins stuck in it, so the pin heads (blunt end) can be gently rested on skin (9b)
- Long (metre) ruler for dropping for reaction time testing (9n)

Whitaker's Cumulative Book List ,1983 The Classification of Sex Donna J. Drucker, 2014-07-31 Alfred C Kinsey s revolutionary studies of human sexual behavior are world renowned His meticulous methods of data collection from comprehensive entomological assemblies to personal sex history interviews raised the bar for empirical evidence to an entirely new level In The Classification of Sex Donna J Drucker presents an original analysis of Kinsey s scientific career in order to uncover the roots of his research methods She describes how his enduring interest as an entomologist and biologist in the compilation and organization of mass data sets structured each of his classification projects As Drucker shows Kinsey s lifelong mission was to find scientific truth in numbers and through observation and to record without prejudice in the spirit of a true taxonomist Kinsey s doctoral work included extensive research of the gall wasp where he gathered and recorded variations in over six million specimens His classification and reclassification of Cynips led to the speciation of the genus that remains today During his graduate training Kinsey developed a strong interest in evolution and the links between entomological and human behavior studies In 1920 he

joined Indiana University as a professor in zoology and soon published an introductory text on biology followed by a coauthored field guide to edible wild plants In 1938 Kinsey began teaching a noncredit course on marriage where he openly discussed sexual behavior and espoused equal opportunity for orgasmic satisfaction in marital relationships Soon after he began gathering case histories of sexual behavior As a pioneer in the nascent field of sexology Kinsey saw that the key to its cogency was grounded in observation combined with the collection and classification of mass data To support the institutionalization of his work he cofounded the Institute for Sex Research at Indiana University in 1947 He and his staff eventually conducted over eighteen thousand personal interviews about sexual behavior and in 1948 he published Sexual Behavior in the Human Male to be followed in 1953 by Sexual Behavior in the Human Female As Drucker's study shows Kinsey's scientific rigor and his early use of data recording methods and observational studies were unparalleled in his field Those practices shaped his entire career and produced a wellspring of new information whether he was studying gall wasp wings writing biology textbooks tracing patterns of evolution or developing a universal theory of human sexuality

Darwin and International Relations Bradley A. Thayer, 2014-07-11

Pathbreaking and controversial Darwin and International Relations offers the first comprehensive analysis of international affairs of state through the lens of evolutionary theory Bradley A Thayer provides a new method for investigating and explaining human and state behavior while generating insights into the origins of human and animal warfare ethnic conflict and the influence of disease on international relations Using ethnological and statistical studies of warfare among tribal societies Thayer argues that humans wage war for reasons predicted by evolutionary theory to gain and protect vital resources but also for the physically and emotionally stimulating effects of combat Thayer demonstrates that an evolutionary understanding of disease will become a more important part of the study of international relations as new strains of diseases emerge and advances in genetics make biological warfare a more effective weapon for states and terrorists He also explains the deep causes of ethnic conflict by illuminating how xenophobia and ethnocentrism evolved in humans He notes that these behaviors once contributed to our ancestors success in radically different environments but they remain a part of us Darwin and International Relations makes a major contribution to our understanding of human history and the future of international relations

"Destined to Fail" Julia Eklund Koza, 2021-08-31 How eugenics became a keystone of modern educational policy

Beyond the Knowledge Crisis Debbie Kasper, 2020-11-03 In the face of complex interwoven planet scale problems many cite the need for more integrated knowledge especially across the natural and social sciences Excessive specialization they argue gets in the way of knowing what we know much less being able to use it to address urgent socio environmental crises These concerns it turns out go back centuries This book picks up where most leave off exploring the history of how we got here and proposing a way forward Along the way readers find that the synthesis long called for depends on theoretical advancements in social science Fortunately the author argues we have everything we need to achieve those advancements thanks largely to the contributions of Norbert Elias Integrating his insights with history science sociological theory and more this book neatly packages the upgraded paradigm we need to be able to meaningfully address complex socio environmental problems and more intentionally shape humanity s collective future
