Contemporary Laboratory Series

INSTRUCTIONS FOR THE USE OF THE RECTILINEAR 5 BOOKSHELF FLOOR SPEAKER SYSTEM.

1. CONNECTION FROM AMPLIFIER TO SPEAKERS:

The Rectilinear 5 is a constant impedance system designed for use with amplifiers of at least 80 watts RMS per channel. Wiring between amplifier and speakers should be heavy gauge (18 gauge minimum), insulated long lead whenever possible. Small gauge "speaker wire" is inadequate and recommended for use with this system as it will result in loss of power output and increased distortion from your program.

When connecting the Rectilinear 5's to your amplifier, be sure they are wired properly. This means that the black binding post of each speaker system should be connected to the terminal marked with a common ground symbol on your amplifier. The red binding post of the speaker should be connected to the terminal of the amplifier marked "R channel" or "L channel". Connect the two speaker systems to the two output terminals of the amplifier and the right speaker system to the right amplifier terminal. (See Figure 1.) Wiring the loudspeakers in phase means that no matter how far apart the two left and right speakers' cones radiating in opposite directions, it does not result in sound wave nulls between the two at installation. No soldering is required to connect wires to these plugs. The female wire should fit snugly into the end of each wire. Remove the wire, making it the surface of the plug. Remove the cap and end of the wire into the hole of the plug. Press lightly into wire firmly, no gap, the wire. If you wish, you may connect directly to the speaker binding posts by stripping the plastic layer immediately before the plug, inserting the wire in the hole of the post, and in replacing the dust cover.

Calculus has been used in solving many scientific and engineering problems For optimization problems however the differential calculus technique sometimes has a drawback when the objective function is step wise discontinuous or multi modal or when decision variables are discrete rather than continuous Thus researchers have recently turned their interests into metaheuristic algorithms that have been inspired by natural phenomena such as evolution animal behavior or metallic annealing This book especially focuses on a music inspired metaheuristic algorithm harmony search Interestingly there exists an analogy between music and optimization each musical instrument corresponds to each decision variable musical note corresponds to variable value and harmony corresponds to solution vector Just like musicians in Jazz improvisation play notes randomly or based on experiences in order to find fantastic harmony variables in the harmony search algorithm have random values or previously memorized good values in order to find optimal solution Experimental Robotics VII Daniela Rus,Sanjiv Singh,2007-09-04

Experimental robotics is at the core of validating robotics research for both its system science and theoretical foundations Robotics experiments serve as a unifying theme for robotics system science and theoretical foundations This book collects papers on the state of the art in experimental robotics The papers were presented at the 2000 International Symposium on Experimental Robotics Location, Transport and Land-Use Yupo Chan,2005-12-05

1 Theme and focus Few books are available to integrate the models for facilities siting transportation and land use Employing state of the art quantitative models and case studies this book would guide the siting of such facilities as transportation terminals warehouses nuclear power plants military bases landfills emergency shelters state parks and industrial plants The book also shows the use of statistical tools for forecasting and analyzing implications of land use decisions The idea is that la use on a map is necessarily a consequence of individual and often conflicting siting decisions over time Since facilities often develop to form a community these decisions are interrelated spatially i e they need to be accessible to one another via the transportation system It is our thesis that a common methodological procedure exists to analyze all these spatial temporal constructs While there are several monographs and texts on subjects related to this book s this volume is unique in that it integrates existing practical and theoretical works on facility location transportation and land use Instead of dealing with individual facility location transportation or the resulting land use pattern individually it provides the underlying principles that are behind these types of models Particularly of interest is the emphasis on counter intuitive decisions that often escape our minds unless deliberate steps of analysis are taken Oriented toward the fundamental principles of infrastructure management the book transcends the traditional engineering and planning disciplines where the
