UML by Example Ghinwa Jalloul, 2004-01-19 This is a step by step introduction to object oriented software development It is suitable for teaching and for self study by practising software engineers seeking to add rigour to their techniques Seven complete case studies are included along with several smaller examples derived from small software projects developed for and delivered to real users These examples make use of a bridge process which presents a systematic approach for developing analysis models and unfolding these incrementally and iteratively through to design models and implementation The process could be viewed as one example of unified software development and has the potential of being scalable to large software problems It also provides a model for organising deliverables obtained throughout different phases of the software life cycle These case studies provide a medium for experimental use and act as templates that can be tailored by readers to fit their specific needs and circumstances

Web Services - ICWS-Europe 2003 Mario Jeckle, Liang-Jie Zhang, 2003-12-22 After some time of early experience Web Services are moving themselves from a new highly fragmented technology to a piece of nowadays infrastructures which promise to address various current challenges These include especially classical issues of integration and data in a heterogeneous environment The Web Service technology provides an open and technology agnostic interface and furthermore propels new usage paradigms in distributed computing infrastructures like Grid Services Successful adoption of Web Service technology relies on the de nition of interoperable architectural building blocks which can be integrated in existing software architectures like J2EE or CORBA heritage Interoperability will surely prove itself as the critical success factor of the Web Service proliferation In order to accomplish these interoperability various standardization bodies such as the W3C UN or OASIS founded activities to create specifications and products implementing these building blocks As the sister event of the First International Conference on Web Services ICWS 2003 which was held in Las Vegas June 23-26 USA has proven to be an excellent catalyst for research and collaboration the 2003 International Conference on Web Services Europe ICWS Europe 2003 is expected to continue this trend The topics of papers collected in this proceedings volume ranges from issues like modeling development deployment publishing as well as discovery composition and collaboration plus monitoring and analytical control Additional contributions summarize some research and development challenges of building Web Service solutions Especially some contributions present an emerging research direction namely Web Services collaboration Moreover some major research activities associated with facilitating extended business collaboration using Web services and semantic annotation are also covered

the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection. A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience. These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself. In fact, their attendance was largely sponsored by the other participants. If evaluated as successful, it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum. All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application pull created by the Internet and the so-called Semantic Web. For DOA 2004, the primary emphasis stayed on the distributed object infrastructure. For ODBASE 2004, it was the knowledge bases and methods required for enabling the use of formal semantics and for CoopIS 2004, the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations. These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them.
