Mathematics through an Institutional Network for Active Learning Wendy M. Smith, Matthew Voigt, April Ström, David C. Webb, W. Gary Martin, 2021-05-05 The purpose of this handbook is to help launch institutional transformations in mathematics departments to improve student success. We report findings from the Student Engagement in Mathematics through an Institutional Network for Active Learning (SEMINAL) study. SEMINAL's purpose is to help change agents (those looking to or currently attempting to enact change within mathematics departments and beyond) trying to reform the instruction of their lower division mathematics courses in order to promote high achievement for all students. SEMINAL specifically studies the change mechanisms that allow postsecondary institutions to incorporate and sustain active learning in Precalculus to Calculus 2 learning environments. Out of the approximately 2.5 million students enrolled in collegiate mathematics courses each year, over 90% are enrolled in Precalculus to Calculus 2 courses. Forty-four percent of mathematics departments think active learning mathematics strategies are important for Precalculus to Calculus 2 courses, but only 15 percent state that they are very successful at implementing them. Therefore, insights into the following research question will help with institutional transformations: What conditions, strategies, interventions and actions at the departmental and

classroom levels contribute to the initiation implementation and institutional sustainability of active learning in the undergraduate calculus sequence Precalculus to Calculus 2 across varied institutions Mathematics of Engineering and Science Mehdi Rahmani-Andebili,2024-11-22 This study guide is designed for students taking courses in engineering mathematics and mathematical methods in science The textbook includes problems with detailed solutions to teach students the subjects in detail and partially and fully solved exercises with hints to required formulas and answers enabling students to practice independently and guiding them through problem solving procedures The material covered in the book includes complex functions complex transformations singularities of complex functions complex series Taylor and Laurent series expansions residue complex integration Fourier series half domain Fourier sine and cosine series complex Fourier series Fourier integral complex Fourier integral Fourier transform half domain Fourier sine and cosine transform and partial differential equations Offering detailed solutions multiple problem solving methods and clear explanations of concepts this hands on tutorial will improve students problem solving skills and foster a solid understanding of engineering mathematics and mathematical methods in science
