Bioproducts and Bioprocesses Armin Fiechter, Hirosuke Okada, Robert D. Tanner, 2012-12-06 The Japanese biotechnology community has developed a unique system of scientific bilateral communications at the international level It consists of closed seminars where a restricted number of speakers from Japan and a selected country are invited Thereby the actual state of biotechnology is visualized very effectively and valuable information exchanged during the discussions and personal contacts As a result strong relationships

between several European and American countries have been built up during recent years and numerous colleagues from abroad have improved their knowledge of Japanese science economy and culture The present volume reports on an American Japanese meeting held in Moriyama which is situated on the lovely Lake Biwa in Japan The well prepared and efficiently organized event covered the major aspects of bioprocess engineering including animal and plant cell culture biocatalysts downstream processing sensor and bioprocess control as well as genetic engineering Altogether a broad spectrum indicating the strengths and weaknesses of the current efforts being made for the improvement of process technology and the search for new products

Advances in Research on Cholera and Related Diarrheas S. Kuwahara, N.F. Pierce, 2012-12-06 The United States Japan Cooperative Medical Science Program was initiated in 1965 by joint agreement between the President of the United States and the Prime Minister of Japan The purpose of the Program was to promote cooperative biomedical research between the two countries especially on health problems of recognized importance in Asia Cholera was designated as one topic of mutual interest Panels of scientists from each country were formed and these met to select priority areas for research The Cholera Panels initially defined two major goals 1 improved and simplified therapy for cholera and 2 better methods for immunization Progress in the pursuit of these goals led to the recognition that bacteria other than *Vibrio cholerae* are also important causes of acute dehydrating diarrhea which resembles cholera in its manifestations and pathogenesis most notable among these are enterotoxinogenic strains of *Escherichia coli* Accordingly panel guidelines were expanded to include all diarrheal diseases that involve fluid loss caused by an enterotoxin More recently studies have shown that vibrios including *V. cholerae* have a distinct environmental life cycle that is probably an important factor in the epidemiology of vibrio infections For this reason the panel guidelines were again expanded to include studies on the environmental ecology of vibrios A major project of the Joint Cholera Panels has been the organization and sponsorship of an annual conference on cholera and related diarrheal diseases
