sendmail Cookbook Craig Hunt, 2003-12-15 More often than not the words sendmail configuration strike dread in the hearts of sendmail and system administrators and not without reason sendmail configuration languages are as complex as any other programming languages but used much more infrequently only when sendmail is installed or configured The average system administrator doesn t get enough practice to truly master this inscrutable technology Fortunately there s help The sendmail Cookbook provides step by step solutions for the administrator

who needs to solve configuration problems fast Say you need to configure sendmail to relay mail for your clients without creating an open relay that will be abused by spammers A recipe in the Cookbook shows you how to do just that No more wading through pages of dense documentation and tutorials and creating your own custom solution just go directly to the recipe that addresses your specific problem Each recipe in the sendmail Cookbook outlines a configuration problem presents the configuration code that solves that problem and then explains the code in detail The discussion of the code is critical because it provides the insight you need to tweak the code for your own circumstances The sendmail Cookbook begins with an overview of the configuration languages offering a quick how to for downloading and compiling the sendmail distribution Next you ll find a baseline configuration recipe upon which many of the subsequent configurations or recipes in the book are based Recipes in the following chapters stand on their own and offer solutions for properly configuring important sendmail functions such as Delivering and forwarding mail Relaying Masquerading Routing mail Controlling spam Strong authentication Securing the mail transport Managing the queue Securing sendmail sendmail Cookbook is more than just a new approach to discussing sendmail configuration The book also provides lots of new material that doesn t get much coverage elsewhere STARTTLS and AUTH are given entire chapters and LDAP is covered in recipes throughout the book But most of all this book is about saving time something that most system administrators have in short supply Pick up the sendmail Cookbook and say good bye to sendmail dread

Advanced Image-Based Spam Detection and Filtering Techniques Dhavale, Sunita Vikrant,2017-03-10 Security technologies have advanced at an accelerated pace in the past few

decades These advancements in cyber security have benefitted many organizations and companies interested in protecting their virtual assets Advanced Image Based Spam Detection and Filtering Techniques provides a detailed examination of the latest strategies and methods used to protect against virtual spam Featuring comprehensive coverage across a range of related topics such as image filters optical character recognition fuzzy inference systems and near duplicate detection this book is an ideal reference source for engineers business managers professionals and researchers seeking innovative technologies to aid in spam recognition Image Spam Filtering Through Multi-features Analysis Zubaidah Muataz Hazza Al Hazza,2015 Email spam has been an ongoing internet security attack It has matured in different forms of attack such as text based spam URL based spam and image based spam By making use of image spam spammers managed to bypass the defence system of most anti spam solutions Here the images display text messages to the end users but the anti spam software only sees pixels and cannot differentiate the text Presently image classification offers effective way to filter image spam It requires extracting and analyzing selected features in the image In this thesis a lightweight image spam filter is proposed and implemented It uses text colour URL and header features Selecting simple and effective methods for each feature has been worked out to reduce the computing cost and enable a lightweight anti image spam solution One main feature being used is detecting the text components in the image which is challenging due to the application of obfuscation methods by spammers Major contributions of this thesis are research and implementation of i text detection method for obfuscated text named Accumulated Text Extraction ATE and ii colour analysis method named Saturation Lightness classification SLC for differentiating between computer generated and natural images and iii image spam filter named Lightweight Image Spam Filter LISF that uses lightweight methods to extract features The proposed image spam filter consists of four phases text analyzer colour analyzer URL analyzer and header analyzer The proposed methods give high detection rates compared to other methods ATE gives F measure value of 86% SLC gives F measure value of 85% and LISF gives F measure value of 88% for detecting image spam The results indicated that the proposed methods for text and colour features are effective and can be applied for image spam filtering **Classification of Image Spam** Shruti Wakade,2011 Image spam is one of the most prevalent forms of spam ever since its inception Spammers have refined their spamming techniques to use smaller more colorful and photo quality images as spam In spite of numerous efforts to build efficient spam filters against e mail spam by researchers and free mailing services like yahoo mail Gmail etc spam filters still fail to arrest image spam This research is an attempt to understand the techniques used in spamming and identifying a set of features that can help in classification of image spam from photographs A set of eight features were identified based on observations and existing research in this area Among the eight features six features have been introduced by us and two other features have been included from previous research Data mining techniques were then applied to classify image spam from photographs Identifying a set of efficient yet computationally inexpensive features was the objective that guided this research work We

achieved classification accuracy of 89% for the test samples A detailed trail of image spam has been studied to identify the most prevalent types and patterns in image spam Our results indicate that five of the six features we had introduced proved to be of high significance in identifying image spam from photographs *Using Artificial Neural Networks to Identify Image Spam* Priscilla Hope, 2008 Internet technology has made international communication easy and convenient This convenience has compelled a number of people to rely on electronic mail for almost all spheres of life personal business etc Scrupulous organizations individuals have taken undue advantage of this convenience and populate users inboxes with unwanted messages making email spam a menace Even as anti spam software producers think they have almost solved the problem spammers come out with new techniques One such tactic in the spammers toolbox comes in the form of image spam messages that contain little more than a link to an image rendered in an HTML mail reader The image typically contains the spam message one hopes to avoid yet it is able to bypass most filters due to the composition and format of these pictures This research focuses on identifying these images as spam by using an artificial neural network ANN software programs used for recognizing patterns based on the biological neural networks in our brains As information propagates through a neural network it learns about the data A large collection of both spam and non spam images have being used to train an ANN and then test the effectiveness of the trained network against an unidentified or already identified set of pictures This process involves formatting images and adding the desired training values expected by the ANN Several different ANNS have being trained using different configurations of hidden layers and nodes per layer A detailed process for preprocessing spam image files is given followed by a description on how to train an artificial neural network to distinguish between ham and spam Finally the trained network is tested against both known and unknown images *The Smallest Sendmail Book* John Ostrowick, 2008 Sendmail is a program which runs on Linux and other Unix like operating systems and its function is as its name suggests to deliver email It also receives email Sendmail is robust stable and highly configurable Sendmail is also one of the oldest programs out there but it is very complicated This book aims to tell you what you need to know to get Sendmail to work It is therefore intended as a book for beginners Sendmail is difficult to understand and has many cryptic error messages After reading through this book however you should be able to configure a Sendmail server and you should be able to understand most of its error messages This new edition includes more detail on spam junk mail filters including Greylisting Spamassassin Sender Address Verification and ClamAV It also now includes a chapter on encryption TLS *The Concept Of Spam In Email Communication* Alena Rudnitskaya, 2009-08-17 Seminar paper from the year 2006 in the subject English Language and Literature Studies Linguistics grade keine LMU Munich Department f r Anglistik und Amerikanistik course Internet Communication language English abstract The communication by email has become one of the most important means of communication in cooperate and private An internet user is constantly confronted by mass emails containing undesired information Spam defined as bulk unsolicited emailing generally commercial in nature and

predominately fraudulent Spam causes high charges and damages Nucleus Research announced that the spam epidemic is costing US businesses 712 per employee each year in lost worker productivity As a result users are spending 16 seconds identifying and deleting each spam e mail which translates into an annual cost of 70 bln to all US businesses Looking at the total e mail traffic Nucleus estimates that at least 90% of e mail reaching corporate servers is spam The average user receives 21 spam messages to their inbox each day Moskalyuk 2007 Regardless of the inefficient time spent there are further costs caused by spam such as cf Filterpoint 2008 Deleted emails remain stored in the trash folder Higher storage costs through higher server expenses Higher bandwidth essential to store the spam mails Time spent by IT staff for anti spam measures Recovery costs after a virus attack Various experts provide a spam calculator that enables to determine the approximate annual costs for an enterprise created by spam Gibbs 2003 Commtouch 2007 The calculator introduced by Gibbs differentiates productivity connectivity storage and support costs This Spam Cost Analysis Model can be found in appendix 1 of this work In this work different types of spam in general and in specific will be pointed out and characterized Measures against unsolicited emails will be reviewed First I start with the definition of spam and where it comes from followed with the spam history Then I briefly list the most common categories and variants of spam used The next step will be the revision of a present situation captured by Commtouch and Symantec as well as statistics on the information learned through spam monitoring during the last few months with the examples of its usage I conclude with an overview of spam solutions offered and point out further research topics in the area
