Sensory Evaluation in Quality Control Alejandra M. Munoz, 2013-11-11 This book addresses an important but so far neglected topic: the application of sensory evaluation to quality control. Although several articles have been published that have discussed concepts of quality control, sensory evaluation, QC sensory programs, *Sensory Evaluation in Quality Control* is the first publication that addresses this topic in a comprehensive and practical way. This book is comprehensive in that it presents the sensory and statistical information that is needed to design and implement several types of QC sensory programs at the plant level. The book is practical in that it provides a step-by-step description of the complete process to implement such programs and it illustrates this process through real examples encountered by various consumer products companies, e.g., foods, personal care products, paper products. With this practical information, sensory and quality professionals can design and implement sound QC sensory programs at the plant level. This book was developed to provide the sensory and quality professional with an overview and guide to apply in a production facility the unique techniques that are used to measure sensory responses. Therefore, the book is intended for QC and/or R&D personnel, e.g., sensory managers and analysts, and quality professionals in charge of implementing an in-plant program, as well as for the plant management and plant technical personnel, sensory coordinator, and quality professionals who are ultimately responsible for the routine operation of the established program. **Global**

Zimmermann, 2020-05-23 This book entitled Cocoa Chocolate and Human Health presents the most recent findings about cocoa and health in 14 peer reviewed chapters including nine original contributions and five reviews from cocoa experts around the world Bioavailability and metabolism of the main cocoa polyphenols i e the flavanols like epicatechin are presented including metabolites like valerolactones that are formed by the gut microbiome Many studies including intervention studies or epidemiological observations do not focus on single compounds but on cocoa as a whole This proves the effectiveness of cocoa as a functional food A positive influence of cocoa on hearing problems exercise performance and metabolic syndrome is discussed with mixed results the results about exercise performance are contradictive Evidence shows that cocoa flavanols may modulate some risk factors related to metabolic syndrome such as hypertension and disorders in glucose and lipid metabolism However several cardiometabolic parameters in type 2 diabetics were not affected by a flavanol rich cocoa powder as simultaneous treatment with pharmaceuticals might have negated the effect of cocoa The putative health promoting components of cocoa are altered during processing like fermentation drying and roasting of cocoa beans Chocolate the most popular cocoa product shows remarkable losses in polyphenols and vitamin E during 18 months of storage

Sensory Evaluation of Food Harry T. Lawless, Hildegard Heymann, 2010-09-27

The field of sensory science has grown exponentially since the publication of the previous version of this work Fifteen years ago the journal Food Quality and Preference was fairly new Now it holds an eminent position as a venue for research on sensory test methods among many other topics Hundreds of articles relevant to sensory testing have appeared in that and in other journals such as the Journal of Sensory Studies Knowledge of the intricate cellular processes in chemoreception as well as their genetic basis has undergone nothing less than a revolution culminating in the award of the Nobel Prize to Buck and Axel in 2004 for their discovery of the olfactory receptor gene super family Advances in statistical methodology have accelerated as well Sensometrics meetings are now vigorous and well attended annual events Ideas like Thurstonian modeling were not widely embraced 15 years ago but now seem to be part of the everyday thought process of many sensory scientists And yet some things stay the same Sensory testing will always involve human participants Humans are tough measuring instruments to work with They come with varying degrees of acumen training experiences differing genetic equipment sensory capabilities and of course different preferences Human foibles and their associated error variance will continue to place a limitation on sensory tests and actionable results Reducing controlling partitioning and explaining error variance are all at the heart of good test methods and practices
