Higher Education Computer Science Jenny Carter,Michael O'Grady,Clive Rosen,2018-09-21 There is currently a great emphasis on teaching quality in Higher Education

In the UK the Teaching Excellence Framework and the National Student Survey have contributed significantly to this focus. Additional support for staff to develop teaching skills has also come from the Higher Education Academy whose fellowship scheme encourages HE staff to focus on their practice in the classroom. The growth in the number of students attending university has resulted in a much wider range of learning styles amongst them. Many students do not fit the idealised average of being adept at learning from primarily text based media. Two further trends are also driving change and innovation in academic staff teaching. The first is the availability of online teaching materials such as MOOCs. The second is the emphasis now given to student postgraduate employability represented by certain aspects of the Teaching Excellence Framework that require students not only to know information but also to be able to articulate that knowledge and to demonstrate their skills. With a desire to enable our students to achieve their highest potential many staff undertake initiatives to facilitate learning that accommodate a wide range of learning styles. This book focuses on approaches to teaching and learning within the discipline of Computer Science. The book consists of a selection of chapters that describe a particular teaching activity or topic within Computing in HE presented in such a way that other practitioners can adopt and adapt them as a way of helping them to develop their own teaching. It provides a number of practical cases of putting theory into practice when teaching Computer Science to both undergraduate and postgraduate students in Higher Education institutions. A chapter on the importance of developing soft skills and a professional online presence is also included as an essential part of preparing the students for their future employment. **ICDSMLA 2021** Amit Kumar, Sabrina Senatore, Vinit Kumar Gunjan, 2023-02-06

This book gathers selected high impact articles from the 3rd International Conference on Data Science Machine Learning Applications 2021. It highlights the latest developments in the areas of artificial intelligence machine learning soft computing human computer interaction and various data science and machine learning applications. It brings together scientists and researchers from different universities and industries around the world to showcase a broad range of perspectives practices and technical expertise. Models in Software Engineering Juergen Dingel, Arnor Solberg, 2011-05-20

This book presents a comprehensive documentation of the scientific outcome of 14 satellite events held at the 13th International Conference on Model Driven Engineering Languages and Systems MODELS 2010 held in Oslo Norway in October 2010. Besides the 21 revised best papers selected from 12 topically focused workshops the post proceedings also covers the doctoral symposium and the educators symposium each of the 14 satellite events covered is introduced by a summary of the respective organizers. All relevant current aspects in model based systems design and analysis are addressed. This book is the companion of the MODELS 2010 main conference proceedings LNCS 6394 6395.
