Molecular and Cellular Aspects of the Serpinopathies and Disorders in Serpin Activity Gary A. Silverman, David A. Lomas, 2007 Serpins constitute a superfamily of proteins that possess a unique tertiary structure and mechanism of proteinase inhibition In humans serpins constitute 10% of the plasma proteins and are best known as critical regulators of both the thrombotic and fibrinolytic systems Serpins also participate in the regulation of the complement cascade angiogenesis tumor metastasis apoptosis and innate immunity Considering the importance of these molecules in regulating proteolytic cascades it is not surprising to find that loss and gain of function mutations result in significant human diseases Massive thrombosis or bleeding hereditary angioedema Alzheimer s disease diabetic angiopathy and tumor invasion are some of the human diseases associated with serpins In addition mutations that alter serpin conformations the serpinopathies lead to lung disease cirrhosis and a form of familial dementia The goal of this text is to present the current knowledge on the molecular and cellular basis of serpins and their diseases

Perfect Pairs, K-2 Melissa Stewart, Nancy Chesley, 2023-10-10 Hands on lessons can be fun and compelling but when it comes to life science they aren t always possible practical effective or safe Children can t follow a lion as it stalks a gazelle visit the exotic kapok tree in a rain forest or swim alongside the underwater life in a pond But they can explore a whole world of animals plants and ecosystems through the pages of beautifully illustrated science themed picture books Perfect Pairs which marries fiction and nonfiction picture books focused on life science helps educators think about and teach life science in a whole new way Each of the twenty two lessons in this book is built around a pair of books that introduces a critical life science concept and guides students through an inquiry based investigative process to explore that idea from animal environment interactions to the role of structure in plant and animal

survival from inheritance of traits to variation of species Each lesson starts with a Wonder Statement and comprises three stages Engaging Students features a hands on activity that captures student interest uncovers current thinking and generates vocabulary The heart of the investigative process Exploring with Students spotlights the paired books as the teacher reads aloud and helps students find and organize information into data tables Encouraging Students to Draw Conclusions shows students how to review and analyze the information they have collected Bringing high quality science themed picture books into the classroom engages a broad range of students addresses the Performance Expectations outlined in the Next Generation Science Standards and supports the goals of the Common Core State Standards for English Language Arts Even if you are science shy Perfect Pairs can help you become a more confident teacher whose classroom buzzes with curious students eager to explore their natural world

Seed Proteins Peter R. Shewry,R. Casey,2012-12-06

Seeds provide more than half of the world s intake of dietary protein and energy and thus are of immense economic cultural and nutritional importance Proteins can account for up to 40% of the dry weight of various types of seeds thereby making a large contribution to the nutritional quality and processing properties of seeds It is therefore not surprising that seed proteins were among the first plant components to be systematically studied some 250 years ago and have been a major focus of research over the past 100 years The properties and behaviour of seed proteins pervade modern life in numerous ways For example legume and cereal proteins are used in the production of a wide range of meat free foods the process of bread making is dependent on the physical chemical properties of wheat seed proteins and in developed as well as developing countries nutritional deficiencies among vegetarian diets are avoided through balancing legume and cereal seeds as sources of dietary proteins Understanding seed proteins in order to improve their composition and properties and to increase their concentrations will thus continue to be an important research objective for the future The present volume represents the culmination of a long discussed plan of the editors to bring together the best international authorities in order to compile a definitive monograph on biological biochemical molecular and genetic aspects of seed proteins
